----- Project Information
Center project name:The Chimpanzee Chromosome 22 Sequencing Project
Center Clone name: RP43-154K22
----- Summary Statistics
Sequencing vector: pUC18,pUC13,prTZ19B; 100% of reads Chemistry:
Dye-terminator Big Dye and ET; 100% of reads Assembly Program:
Phrap; version 0.990329
Consensus quality: 191,815 bases at least Q40
Consensus quality: 960 bases at least Q30
Consensus quality: 61 bases at least Q20
-----
This sequence was finished as follows unless otherwise noted: all
regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30);
an attempt was made to resolve all sequencing problems, such as
compressions and repeats; all regions were covered by at one
plasmid
subclone or more than one M13 subclone;
and the assembly was confirmed by restriction digest.
-----
Source information:
The RPCI-43 chimpanzee BAC library was prepared from DNA isolated
from the blood of a single male chimpanzee using published
protocols (Osoegawa,K. et al. Genomics 52:1-8). The DNA from the
chimpanzee ('Clint') was obtained from the Yerkes Primate Center in
Atlanta. The library was prepared by Baoli Zhu, Chung Li Shu,
Kazutoyo Osoegawa, Evan Eichler & Pieter J de Jong. The library
characteristics are described at
http://www.chori.org/bacpac/mchimp43.htm.
The clone may be obtained from Pieter J. de Jong and coworkers
(http://www.chori.org/bacpac).
VECTOR: pBACE3.6

```

The CHORI-251 chimpanzee BAC library was prepared from DNA isolated from the blood of a single male chimpanzee using published protocols (Osoegawa, K. et al. Genomics 52:1-8). The DNA from the chimpanzee ('Cline') was obtained from the Yerkes Primate Center in Atlanta. The library was prepared by Baoji Zhu, Chung Li Shu, Kazutoyo Osoegawa, Evan Bichler & Pieter J de Jong. The library characteristics are described at <http://www.chori.org/bacpac/chimpanzee251.htm>. The clone may be obtained from Pieter J. de Jong and coworkers (<http://www.chori.org/bacpac>).

VECTOR: pTARBAC2.1  
The PTB1 chimpanzee BAC library was prepared from DNA isolated from cultured cells established from the blood of a single male chimpanzee.

Clones may be obtained from Asao Fujiyama and co-workers (<http://www.gsc.riken.go.jp>).

VECTOR: pKS145

The PT722 chimpanzee Fosmid library was prepared from DNA isolated from cultured cells established from the blood of a single male chimpanzee.

Clones may be obtained from Asao Fujiyama and co-workers (<http://www.gsc.riken.go.jp>).

VECTOR: pKS143

#### Sequence Quality Assessment:

This entry has been annotated with sequence estimates computed by the Phrap assembly program.

All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

Neighboring clones: PTB-083K24 (left) and PTB-086M04 (right).

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at

[http://www.sanger.ac.uk/Projects/C\\_elegans/wormpep](http://www.sanger.ac.uk/Projects/C_elegans/wormpep) Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see

[http://www.sanger.ac.uk/Projects/D\\_rexio/fishmask.shtml](http://www.sanger.ac.uk/Projects/D_rexio/fishmask.shtml) DKEY-32N7 is from a Zebrafish BAC library

## JOURNAL

Submitted (30-MAY-2005) Human Genome Sequencing Center, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
On Jan 29, 2005 this sequence version replaced gi:56676412.  
Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.

## COMMENT

The repeat regions shown were identified using RepeatMasker by Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui Zhang.

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

Submitted (09-AUG-1999) Drosophila Genome Center, Lawrence Berkeley  
 Laboratory, MS 64-121, Berkeley, CA 94720, USA  
 On Mar 10, 2001 this sequence version replaced gi:5734689.  
 Sequence submitted by:  
 Lawrence Berkeley National Laboratory, MS 64-121  
 Berkeley, CA 94720

This sequence was assembled using end sequences from a whole genome  
 shotgun and from subclones of this BAC and its neighboring clones.  
 For further information about this sequence, including its location  
 and relationship to other sequences, please visit our sequence  
 archive Web site (<http://www.fruitfly.org/sequence/>) or send email  
 to [bdgp@fruitfly.berkeley.edu](mailto:bdgp@fruitfly.berkeley.edu).

 Cow Genome Sequencing Consortium.  
 Direct Submission  
 Submitted (01-JUN-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
 On Jun 29, 2005 this sequence version replaced gi:62420179.  
 The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separate by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Project Information  
Center project name: L32735  
Center clone name: 469 M 13  
----- Summary Statistics  
Sequencing vector: Plasmid; n/a; 100% of reads  
Chemistry: Dye-terminator Big Dye; 100% of reads  
Assembly program: Phrap; version 0.960731  
Consensus quality: 152487 bases at least Q40  
Consensus quality: 156020 bases at least Q30  
Consensus quality: 158188 bases at least Q20  
Insert size: 230000; agarose-fp  
Insert size: 159497; sum-of-contigs  
Quality coverage: 3.7 in Q20 bases; agarose-fp  
Quality coverage: 5.3 in Q20 bases; sum-of-contigs  
-----  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 21 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.  
\* 1 1388: contig of 1388 bp in length  
\* 1389 1488: gap of unknown length  
\* 1489 1812: contig of 324 bp in length  
\* 1813 1912: gap of unknown length  
\* 1913 2674: contig of 762 bp in length  
\* 2675 2775: gap of unknown length  
\* 2775 3270: contig of 496 bp in length  
\* 3271 3370: gap of unknown length  
\* 3371 4460: contig of 1090 bp in length  
\* 4461 4560: gap of unknown length  
\* 4561 6908: contig of 2348 bp in length  
\* 6909 7008: gap of unknown length  
\* 7009 9982: contig of 2974 bp in length  
\* 9983 10083: gap of unknown length  
\* 10084 11832: contig of 1750 bp in length  
\* 11833 11933: gap of unknown length  
\* 11934 14904: contig of 2971 bp in length  
\* 14905 15004: gap of unknown length  
\* 15005 18537: contig of 3534 bp in length  
\* 18538 18638: gap of unknown length  
\* 18639 21921: contig of 3284 bp in length  
\* 21922 26146: gap of unknown length  
\* 26147 31488: contig of 5243 bp in length  
\* 31489 31588: gap of unknown length  
\* 31589 36567: contig of 4979 bp in length  
\* 36568 42840: contig of 6173 bp in length  
\* 42841 42940: gap of unknown length  
\* 42941 70982: contig of 28042 bp in length  
\* 70983 87513: contig of 16431 bp in length  
\* 87514 104741: contig of 17127 bp in length  
\* 104742 104840: gap of unknown length  
\* 104841 128106: contig of 23266 bp in length  
\* 128107 128206: gap of unknown length  
\* 128207 154032: contig of 25826 bp in length  
\* 154033 154133: gap of unknown length  
\* 154134 161497: contig of 7365 bp in length.

COMMENT

On Jun 13, 2001 this sequence version replaced gi:14270001.  
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:  
Em:, ENBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at  
[http://www.sanger.ac.uk/projects/C\\_elegans/wormpep](http://www.sanger.ac.uk/projects/C_elegans/wormpep) This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the sanger Centre Chromosome 6 Mapping Group. Further information can be found at  
<http://www.sanger.ac.uk/HGP/Chr6>  
RP11-418P12 is from the library RPC1-11.2 constructed by the group of Pieter de Jong. For further details see  
<http://www.chori.org/bacpac/home.htm>  
VECTOP: PRACE1.6

Center: Wellcome Trust Sanger Institute  
Center code: SC  
Web site: <http://www.sanger.ac.uk>  
Contact: [vega@sanger.ac.uk](mailto:vega@sanger.ac.uk)

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

(GENE-) GENE LOGIC INC.

Mendrick D, Porter M, Johnson K, Higgs B, Castle A, Elashoff M;

WPI; 2003-148464/14.

Predicting at least one toxic effect of a compound, useful for toxicity

modeling, comprises preparing a gene expression profile of a tissue or

cell sample exposed to the compound, and comparing the gene expression

profile to a database.

Example 4; Page: 446pp; English.

The invention relates to a novel method of predicting at least one toxic

effect of a compound. The method comprises a gene expression profile of a

tissue or cell sample exposed to the compound, and comparing the gene

expression profile to a database comprising at least part of the data or

information given in the specification. The methods are useful for

predicting at least one toxic effect of a compound, predicting the renal

progression of a toxic effect of a compound, predicting the renal

toxicity of a compound, or identifying toxicity markers in tissues or

cells exposed to known renal toxin. The genes are useful as toxicity

markers in drug screening and toxicity assays, in monitoring disease or

physiological states, or disease progression. This polynucleotide

represents a rat DNA sequence relating to the toxic effect database

described in the specification. NOTE: The sequence data for this patent

did not form part of the printed specification, but was obtained in

electronic format directly from the World Intellectual Property

Organization

XX
PA (HUMA-) HUMAN GENOME SCI INC.
XX
PI Rosen CA, Barash SC, Ruben SM;
XX
XX WPI; 2001-451937/48.
XX
XX Isolated polypeptide for treating, preventing and/ or prognosing
PT disorders related to the musculoskeletal system including musculoskeletal
PT cancers and also for testing and detection e.g. diagnosis.
XX
XX Example 2; SEQ ID NO 3622; 781pp + Sequence Listing; English.
XX
XX The invention relates to novel genes (AAL34669-AAL37666) and proteins
CC (ABB03087-ABB04109) associated with the musculoskeletal system useful for
CC preventing, treating or ameliorating medical conditions e.g. by protein
CC or gene therapy. The genes are isolated from a range of human tissues
CC disclosed in the specification. The nucleic acids, proteins, antibodies
CC and (ant)agonists are useful in the diagnosis, treatment and prevention
CC of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the
CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,
CC lung, or urogenital; (b) immune disorders e.g. Addison's disease,
CC allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,
CC diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid
CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as
CC myocardial ischaemia; (d) wound healing; (e) neurological diseases e.g.
CC cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,
CC bacterial, fungal and parasitic infections. Note: The sequence data for
CC this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

 (HUMA-) HUMAN GENOME SCI INC.  
 Rosen CA, Barash SC, Ruben SM;  
 WPI; 2001-451937/48.

Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g. diagnosis.  
 Example 2; SEQ ID NO 3635; 781pp + Sequence Listing; English.  
 The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABR03087-ABR04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIFO at ftp.wipo.int/pub/published\_pct\_sequences

 PT Isolated nucleic acid molecules encoding musculoskeletal system  
 PT associated polypeptides, useful for detecting disorders, e.g. cancer.  
 XX  
 PS Disclosure; SEQ ID NO 3622; 321pp; English.  
 XX  
 CC The invention describes an isolated nucleic acid molecule comprising a  
 CC sequence encoding musculoskeletal system associated polypeptides useful  
 CC for detecting disorders, e.g., cancer or cancer metastases, in animals or  
 CC humans. The nucleic acid; stimulates re-vascularisation of ischaemic  
 CC tissues associated with conditions such as thrombosis, arteriosclerosis,  
 CC and other cardiovascular conditions; treats wounds due to injuries,  
 CC burns, post-operative tissue repair, and ulcers; stimulates angiogenesis  
 CC and limb regeneration; stimulates neuronal growth; can treat and prevent  
 CC neuronal damage occurring in certain disorders or neurodegenerative  
 CC conditions, such as, Alzheimer's disease, Parkinson's disease, and AIDS-  
 CC related complex; stimulates chondrocyte growth, thus they can be used to

CC enhance bone and periodontal regeneration and aid in tissue transports or  
 CC bone grafts; prevents skin aging due to sunburn by stimulating  
 CC keratinocyte growth; prevents hair loss, since FGF family members  
 CC activate hair-forming cells and promotes melanocyte growth; stimulates  
 CC growth and differentiation of hematopoietic cells and bone marrow cells  
 CC when used in combination with other cytokines; maintains organs before  
 CC transplantation or for supporting cell culture of primary tissues;  
 CC induces tissue of mesodermal origin to differentiate in early embryos;  
 CC increases or decreases the differentiation or proliferation of embryonic  
 CC stem cells, besides, haematopoietic lineage; modulates mammalian  
 CC characteristics, such as, body height, weight, hair colour, eye colour,  
 CC skin, percentage of adipose tissue, pigmentation, size, and shape (e.g.,  
 CC cosmetic surgery); modulates mammalian metabolism; changes mammal's metal  
 CC state or physical state by influencing biorhythms, cardiac rhythms,  
 CC depression, tendency for violence, tolerance for pain, reproductive  
 CC capabilities, hormonal or endocrine levels, appetite, libido, memory, or  
 CC stress; increases or decreases storage capabilities, fat content, lipid,  
 CC protein, carbohydrate, vitamins, minerals, cofactors or other nutritional  
 CC components. This sequence encodes a novel human musculoskeletal system  
 CC antigen. Note: The sequence data for this patent did not form part of the  
 CC printed specification, but was obtained in electronic format directly  
 CC from the US patent office at  
 CC ftp.seqdata.uspto.gov/sequence.html?DocID=20020147140

XX The invention relates to a novel isolated musculoskeletal system-  
CC associated nucleic acid molecule. The nucleic acid of the invention  
CC demonstrates cytostatic and osteopathic activities and may be useful for  
CC preparing a medicament for preventing, treating or ameliorating a medical  
CC condition such as cancer of the musculoskeletal tissues or osteoporosis,  
CC possibly via gene therapy or vaccine production. The current sequence is  
CC that of the human musculoskeletal system-associated genomic DNA of the  
CC invention. The current sequence is not shown within the specification per  
CC se but is available on the USPTO web-site  
CC http:seqdata.uspto.gov/sequence.html?DocID=20040009488.

XX  
XX Disclosure; SEQ ID NO 157; 143pp; English.  
XX  
XX The present invention describes human cancer-associated (CA) nucleotide  
CC sequences (I). Also described: (1) an expression vector comprising (I);  
CC (2) a host cell comprising (I) or the expression vector; (3) a microarray  
CC for detecting a CA nucleic acid; (4) an isolated polypeptide encoded  
CC within an open reading frame of a CA sequence; (5) an isolated antibody,  
CC or its antigen binding fragment, that binds to the above polypeptide; (6)  
CC a hybridoma that produces the monoclonal antibody described above; (7) a  
CC pharmaceutical composition comprising the antibody and a pharmaceutical  
CC excipient; (8) a kit for detecting or diagnosing cancer cells, comprising  
CC the above (monoclonal) antibody or polynucleotide that selectively  
CC hybridizes to any of the polynucleotide sequences mentioned above; (9)  
CC methods for diagnosing cancer or for detecting the presence or absence of  
CC cancer cells in an individual; (10) a method for inhibiting growth of  
CC cancer cells in an individual; (11) a method for delivering a therapeutic  
CC agent to cancer cells in an individual; (12) an electronic library  
CC comprising the polynucleotide or polypeptide, or their fragments,  
CC mentioned above; (13) a method of screening for anticancer activity; (14)  
CC methods for detecting cancer associated with expression of a polypeptide  
CC or the presence of the antibody in a test cell or serum sample; (15) a  
CC method for screening for a bioactive agent capable of modulating the  
CC activity of a CA protein encoded by the above nucleic acid molecule; and  
CC (16) a method for treating cancers. (I) has cytostatic activity, and can  
CC be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,  
CC and as a G-protein coupled receptor antagonist. The compositions and  
CC methods of the present invention can be used for diagnosing, preventing  
CC and treating cancer, especially lymphomas. They may also be used in  
CC screening for agents that may be used for treating or preventing cancer.  
CC The present sequence represents a human CA gene sequence, which is given  
CC in the exemplification of the present invention. Note: The sequence data  
CC for this patent did not form part of the printed specification, but was  
CC obtained in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences.

XX Nucleic acid array useful for detecting cancer associated nucleic acid,  
PT comprises two or more nucleic acid probes.  
PT  
XX Disclosure; SEQ ID NO 1422; 199pp; English.  
XX  
XX The invention relates to a nucleic acid array for detecting a cancer  
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.  
CC The invention also relates to a peptide array comprising two or more  
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound  
CC that binds to a polypeptide, an isolated antibody or its fragment which  
CC binds to a polypeptide, which is prepared by immunizing a host animal  
CC with a composition comprising the polypeptide or its antigen binding  
CC fragment and collecting cells from the host expressing antibodies against  
CC the antigen or its antigen binding fragment, a composition comprising the  
CC antibody and a carrier, a method of screening for anticancer activity, a  
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a  
CC method of treating cancer and a method of inhibiting expression of a CA  
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA  
CC nucleic acids. The antibody is useful for detecting the presence or  
CC absence of cancer cells in an individual which involves contacting cells  
CC from the individual with the antibody and detecting a complex of a CA  
CC protein from the cancer cells and the antibody, where the detection of  
CC the complex correlates with the presence of cancer cells in the  
CC individual. The composition is useful for inhibiting growth of cancer  
CC cells in an individual or for delivering a therapeutic agent to cancer  
CC cells in an individual. The invention is also useful for diagnosing  
CC cancer, for treating cancer and for inhibiting expression of a CA gene in  
CC a cell. This sequence represents murine cancer-associated genomic DNA of  
CC the invention.

FS	
XX	
CC	The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human gene expression (comprising a plurality of single exon nucleic acid probes cited above, where each of the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of measuring human gene expression, a vector comprising the single exon probe cited above, an ORF-encoded peptide comprising at least 8 contiguous amino acids of any of the above-mentioned amino acid sequences (optionally with conservative amino acid substitutions), an isolated antibody that binds specifically to a peptide cited above,

CC methods of selling and/or licensing single exon probes or microarrays to  
CC a customer desiring to measure gene expression, a method of providing  
CC human gene expression data by subcription, and a computer-readable  
CC storage medium which contains a database having a plurality of records  
CC (each record including data on the expression of a single exon probe  
CC cited above. The probe, methods and apparatus are useful in gene  
CC -expression analysis. The probes may be used as tools for surveying  
CC tissues to detect the presence of expressed messages that contain their  
CC specific exon, or in constructing genome-derived single exon microarrays.  
CC In addition, the probes are used in identifying and characterising  
CC alternative splicing events, in detecting and characterising gross  
CC alterations in the genomic locus that includes their exon, in assessing  
CC smaller genomic alterations, in priming the synthesis of nucleic acids,  
CC or in expressing the ORF-encoded peptide. The present sequence is a human  
CC single exon probe of the invention. Note: The sequence data for this  
CC patent did not form part of the printed specification, but was obtained  
CC in electronic format directly from USPTO at  
CC seqdata.uspto.gov/sequence.html?DocID=20030194704

XX Identifying a stress condition to which a plant cell has been exposed and  
PT producing plants with increased tolerance to these abiotic stresses.  
XX  
XX Claim 144; SEQ ID NO 3478; 577pp + Sequence Listing; English.  
PS  
XX The invention relates to identifying a stress condition to which a plant  
XX cell has been exposed, comprising: (a) contacting nucleic acid  
CC representative of expressed polynucleotides in the plant cell with an  
CC array or probes representative of the plant cell genome; and (b)  
CC detecting a profile of expressed polynucleotides in the plant cell  
CC characteristic of a stress response. The method is useful in the  
CC production of transgenic plants, cells and seeds and in producing plants  
XX

CC with increased tolerance to abiotic stress. The present sequence is that  
CC of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used  
CC in methods of the invention. Note: The sequence data for this patent is  
CC not represented in the printed specification but is based on sequence  
CC information supplied to Derwent by the European Patent Office

XX Novel isolated polypeptide associated with breast cancer, useful for  
PT detecting presence of polypeptide in sample, as a marker for breast  
PT cancer.  
XX

XX Disclosure; SEQ ID NO 7215; 36pp; English.  
PS  
XX The invention relates to an isolated polypeptide (I) associated with a  
XX breast cancer which is encoded by a nucleic acid molecule comprising a  
CC nucleotide sequence (S1). Further disclosed is an antibody that binds to  
CC the polypeptide of the invention. The activity of the polypeptide of the  
CC invention may be described as cytostatic. The antibody is useful for  
CC detecting the presence of (I) in a sample. Nucleic acid molecules of the  
CC invention are useful in the detection of breast tumours. (I) is useful as  
CC a marker for breast cancer and in breast cancer therapy. Sequences given  
CC in records ACN78851-ACN92934 represent nucleic acid markers associated  
CC with breast cancer. Note: The sequence listing does not form part of the  
CC specification but may be obtained in electronic format from the USPTO web  
CC site at seqdata.uspto.gov/sequence.html?DocID=20030099974

XX  
XX New recombinant DNA construct comprising a promoter positioned to provide  
PT for expression of a polynucleotide encoding a polypeptide from a  
PT microbial source, useful for producing plants with improved properties.  
XX  
XX Claim 1; SEQ ID NO 33506; 122pp; English.  
XX  
XX The invention relates to a recombinant DNA construct comprising a  
CC promoter functional in a plant cell, where the promoter is positioned to  
CC provide for expression of a polynucleotide encoding a polypeptide from a  
CC microbial source. The invention also relates to a transformed plant  
CC comprising the recombinant DNA construct and a method of producing a  
CC transformed plant having an improved property. The plant is a crop plant  
CC such as maize or soybean. The method of producing a transformed plant  
CC having an improved property comprises transforming a plant with the  
CC recombinant DNA construct and growing the transformed plant, where the  
CC polynucleotide or polypeptide is useful for improving plant properties.  
CC The recombinant DNA construct is useful for producing plants with  
CC improved plant properties, e.g. improved cold, heat or drought tolerance,  
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,  
CC increased resistance to plant disease, better growth rate by modification  
CC of the cell cycle pathway with plant growth regulators, increased rate of  
CC homologous recombination, modified seed oil or protein yield and/or  
CC content, improved yield by modification of carbohydrate, nitrogen or  
CC phosphorus use and/or uptake, by modification of photosynthesis or by  
CC providing improved plant growth and development under at least one stress  
CC condition, improved lignin production or improved galactomannan  
CC production. This sequence represents a bacterial polynucleotide used in  
CC the scope of the invention. Note: The sequence data for this patent did  
CC not form part of the printed specification but was obtained in electronic  
CC format from USPTO at [seqdata.uspto.gov/sequence.html](http://seqdata.uspto.gov/sequence.html).

XX
XX Screening for anti-neoplastic agent involves exposing cells to a chemical
PT agent to be tested for anti-neoplastic activity, and determining a change
PT in expression of a gene of a signature gene set.
XX
XX Claim 1; SEQ ID NO 6892; 44pp; English.
XX
XX The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 9% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
CC tumour

XX WPI; 2003-895307/82.
XX
XX A composition comprising a plurality of cDNAs, useful for detecting
PT altered expression of genes in an immunological response or for
PT diagnosing and treating an immunopathology, e.g. Crohn's disease, asthma
PT or osteoarthritis.
XX
XX Claim 1; SEQ ID NO 936; 50pp; English.
XX
XX The invention relates to a composition comprising a plurality of cDNAs
CC for detecting the altered expression of genes in an immunological
CC response. The invention also relates to a method of diagnosing or
CC monitoring the treatment of an immunopathological condition in a sample,
CC comprising obtaining nucleic acids from a sample, contacting the nucleic
CC acids of the sample with an array comprising the plurality of cDNAs under
CC conditions to form one or more hybridisation complexes, detecting the
CC hybridisation complexes and comparing the levels of the detected
CC hybridisation complexes with the level of hybridisation complexes
CC detected in a non-diseased sample, where an altered level of the detected
CC hybridisation complexes correlates with the presence of an
CC immunopathological condition. Also disclosed are an expression profile
CC comprising a microarray and a plurality of detectable complexes and a
CC method for identifying a plurality of polynucleotide probes. The cDNAs
CC are useful as hybridisable array elements in a microarray for monitoring
CC the expression of target polynucleotides. The microarray can be used in
CC the diagnosis of an immunopathology, such as Crohn's disease, asthma,
CC ulcerative colitis, hyperesoinophilia, irritable bowel syndrome,
CC osteoarthritis, rheumatoid arthritis or acute monocytic leukaemia, and in
CC identifying agents for the treatment of the diseases. The microarray may
CC also be used in drug discovery and development, toxicological and
CC carcinogenicity studies, forensics or pharmacogenomics. The composition
CC may also be used in purification of a subpopulation of mRNAs, cDNAs or
CC genomic fragments. This sequence represents a human cDNA of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification but was obtained in electronic format directly
CC from USPTO at seqdata.uspto.gov/sequence.html.

 CC polynucleotide or polypeptide is useful for improving plant properties.  
 CC The recombinant DNA construct is useful for producing plants with  
 CC improved plant properties, e.g. improved cold, heat or drought tolerance,  
 CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,  
 CC increased resistance to plant disease, better growth rate by modification  
 CC of the cell cycle pathway with plant growth regulators, increased rate of  
 CC homologous recombination, modified seed oil or protein yield and/or  
 CC content, improved yield by modification of carbohydrate, nitrogen or  
 CC phosphorus use and/or uptake, by modification of photosynthesis or by  
 CC providing improved plant growth and development under at least one stress  
 CC condition, improved lignin production or improved galactomannan  
 CC production. This sequence represents a bacterial polynucleotide used in  
 CC the scope of the invention. Note: The sequence data for this patent did  
 CC not form part of the printed specification but was obtained in electronic  
 CC format from USPTO at seqdata.uspto.gov/sequence.html.

PT New complex between two interacting proteins in adipocyte cells, useful  
PT for identifying selected interacting domains that modulate protein  
PT interactions, or for preventing or treating metabolic disorders such as  
PT obesity or diabetes.  
XX  
XX Claim 7; Page 230-231; 382pp; English.  
PS  
XX The invention relates to a complex between two interacting proteins in  
CC adipocyte cells, given in the specification. The proteins are identified  
CC by selecting a bait protein from a known adipocyte marker and then  
CC performing a yeast 2-hybrid selection to isolate prey proteins encoded by  
CC members of an adipocyte cDNA library. The proteins are designated SID  
CC (RTM) (selected interacting domains) proteins. Also included are a  
CC polynucleotide encoding a polypeptide in the adipocyte cells, a  
CC recombinant host cell expressing at least one of the interacting  
CC polypeptides of the complex, selecting a modulating compound in adipocyte  
CC cells, a SID (RTM) polypeptide comprising any of the 738 amino acid  
CC sequences given in the specification (including its fragment or variant),  
CC a SID (RTM) polynucleotide comprising any of the 738 nucleotide sequences  
CC given in the specification (including its fragment or variant), a vector  
CC comprising the SID (RTM) polynucleotide, a recombinant host cell  
CC comprising the vector, a protein chip comprising the polypeptides and a  
CC record comprising all or part of the data, listed in the specification.  
CC The complex, polypeptides, polynucleotides and compounds are useful for  
CC preventing or treating metabolic disorders such as obesity or diabetes.  
CC The polynucleotides are useful as probes or primers. The complex is  
CC particularly useful for identifying selected interacting domains (SID  
CC (RTM)) for screening drugs that modulate the protein interaction, thus  
CC exhibiting the therapeutic effect. The present sequence encodes a SID  
CC (prey) protein of the invention

PT New nucleic acid differentially expressed in pancreatic tumor tissue, for  
XX use as diagnostic agents and in screening for therapeutic agents.

PS Claim 1; SEQ ID NO 53; 28pp; German.

XX The invention relates to a novel human nucleic acid sequence of the  
CC pancreas and its encoded protein. The invention further comprises:  
CC proteins and peptides, preferably isolated, that contain a sequence  
CC encoded by the novel nucleic acid; and methods for diagnosis and  
CC treatment of pancreatic cancer, using a substance that inhibits or binds  
CC to the protein or its DNA, including: an antisense oligonucleotide, short  
CC interfering RNA or ribozyme directed against the pancreatic protein, an  
CC organic molecule, particularly having a molecular weight below 5000,  
CC especially 300, that binds to the pancreatic DNA, an aptamer or  
CC (monoclonal) antibody, preferably human or humanized, that binds to the  
CC pancreatic DNA, or an anti-idiotypic antibody raised against the  
CC monoclonal antibody, any of which may be derivatized with a reporter  
CC group, cytotoxic compound, immunostimulant and/or radioisotope. The novel  
CC human pancreatic proteins and their encoding DNA have cytostatic  
CC activity. The novel sequences are useful for inhibiting transcription  
CC and/or expression of genes and proteins associated with pancreatic  
CC cancer. This polynucleotide sequence represents the DNA encoding one of  
CC the novel human pancreatic proteins of the invention. Note: This sequence  
CC is not shown in the specification, it has been electronically downloaded  
CC from a DVD-ROM provided with this specification by the European Patent  
CC Office.

PT administering to a subject an amount of a modulator of any of the  
PT proteins regulated by ISP.

XX

PS Disclosure; SEQ ID NO 586; 70pp; English.

XX The present invention relates to a method for treating, preventing or  
CC ameliorating pathological conditions associated with dysregulation of the  
CC insulin signaling pathway (ISP). The method comprises administering to a  
CC subject a modulator for ISP-regulated proteins or a pharmaceutical  
CC composition comprising the described modulator. The method is useful for  
CC treating, preventing or ameliorating pathological conditions associated  
CC with dysregulation of the ISP such as Type II diabetes or Type A syndrome  
CC of insulin resistance. The present sequence is a human homolog of a  
CC Drosophila gene regulated by ISP. Note: The sequence data for this patent  
CC did not form part of the printed specification, but was obtained in  
CC electronic format directly from USPTO at  
CC seqdata.uspto.gov/sequence.html?DocID=20050085436.

 PT sativa, Saccharomyces cerevisiae, and Papaver rhoeas, useful for  
 PT conferring altered visual phenotypes in plants.  
 XX  
 PS Claim 1; SEQ ID NO 1129; 517pp; English.  
 XX  
 CC This invention relates to the identification and isolation of novel  
 CC nucleic acid molecules that confer altered visual phenotypes in plants.  
 CC Specifically, it refers to modifications of plant architecture and/ or  
 CC leaf surface features in plants, such as chlorotic, bleaching, etching,  
 CC wet leaf, stunting, elongation and texture phenotypes, which are thought  
 CC will be agronomic traits beneficial to the farmer. As such, these novel  
 CC phenotypes can affect growth regulation i.e. useful for creating dwarf  
 CC varieties, exhibit resistance to insects or heat stress, confer changes  
 CC in pigment content such that plants have enhanced vitamin production or  
 CC delayed senescence and also for example produce plants that control the  
 CC production of ethylene. Furthermore, the present invention comprises  
 CC generating transgenic plants, as well as reproducibly altering the visual  
 CC phenotype of plant seeds, plant tissues and plant cells containing the  
 CC polynucleotides described herein. This polynucleotide is a homologue of a  
 CC DNA sequence that confers an altered visual phenotype when expressed in  
 CC plants, the method of the invention.

PS Disclosure; SEQ ID NO 199; 99pp; English.  
XX  
CC The invention relates to newly discovered cancer markers associated with  
CC the cancerous state of prostate cells. Also disclosed is a method of

CC assessing whether a patient is afflicted with prostate cancer. The method  
CC of the invention involves assessing whether a patient is afflicted with  
CC prostate cancer by comparing the level of expression of a marker in a  
CC patient sample and the normal level of expression of the marker in a  
CC control non-prostate cancer sample, where a significant increase in the  
CC level of expression of the marker in the patient sample and the normal  
CC level indicates that the patient is afflicted with prostate cancer.  
CC Nucleic acids of the invention are useful for diagnosing or treating  
CC prostate cancer, and may be useful in gene therapy. Sequences given in  
CC ADB75177-ADB75631 represent marker cDNA and proteins. Note: The sequence  
CC data for this patent did not form part of the printed specification, but  
CC was obtained in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences.

PS disclosure; seqid 773; 310pp; English.  
XX  
CC The invention relates to an isolated nucleic acid comprising at least 10  
CC contiguous nucleotides of any of the 233 polynucleotide sequences given  
CC in the specification, or its complement. The nucleic acids encode cancer-  
CC associated proteins. Also included are an expression vector comprising  
CC the isolated nucleic acid cited above, a host cell comprising the above  
CC recombinant nucleic acid or expression vector, a microarray for detecting  
CC a cancer-associated (CA) nucleic acid comprising at least one probe  
CC comprising at least 10 contiguous nucleotides of any of the above-

CC mentioned nucleotide sequences, an isolated polypeptide (encoded within  
CC an open reading frame of a CA sequence selected from any of the 95  
CC polynucleotide sequences as mentioned in the specification, or its  
CC complement), an isolated antibody, (or its antigen binding fragment) that  
CC binds to the above polypeptide, a hybridoma that produces the above  
CC monoclonal antibody, a pharmaceutical composition comprising the above  
CC antibody and a pharmaceutical excipient, a kit for detecting cancer  
CC cells (comprising the antibody cited above, methods for diagnosing cancer  
CC or for detecting the presence or absence of cancer cells in an  
CC individual, a method for inhibiting growth of cancer cells in an  
CC individual, a method for delivering a therapeutic agent to cancer cells  
CC in an individual, an electronic library comprising the above  
CC polynucleotide or polypeptide (or their fragments), methods of screening  
CC for anticancer activity or for a bioactive agent capable of modulating  
CC the activity of a CA protein (CAP), methods for detecting cancer  
CC associated with expression of a polypeptide in a test cell sample, a  
CC method for treating cancers and a method for inhibiting the expression of  
CC CA gene in a cell. The composition and methods are useful for detecting,  
CC diagnosing, preventing and treating cancers, especially lymphoma and  
CC leukaemia. These may also be used in screening for agents that modulate  
CC cancer. The present sequence is a mouse CAP genomic sequence. Note: The  
CC sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pct\_sequences

XX Novel antisense oligonucleotide that specifically hybridizes with and  
XX inhibits nucleic acid encoding epidermal growth factor receptor, useful  
XX for treating hyperproliferative disease such as cancer or psoriasis.

PS Example 19; Page 67-121; 169pp; English.

XX The invention relates to an antisense oligonucleotide targetted to a  
CC nucleic acid molecule encoding human epidermal growth factor receptor  
CC (Her1) to inhibit its expression. The antisense compounds are useful for  
CC treating diseases or conditions associated with Her-1 such as  
CC hyperproliferative diseases especially cancer (lung, ovarian, colon or  
CC prostate cancer) and psoriasis. They are also useful as research  
CC reagents, diagnostics, therapeutics, kits and prophylactically e.g. to  
CC prevent or delay tumour formation. The present sequence is human Her-1  
CC gene

XX Determining chemotherapeutic regimen of receptor tyrosine kinase targeted  
XX agent for treating tumor by examining EGFR and/or HER2-neu mRNA amount in  
XX tumor cells, comparing it to predetermined threshold expression level.

PS Disclosure; Page 71-124; 125pp; English.

XX The invention relates to determining the chemotherapeutic regimen of  
CC receptor tyrosine kinase targeted agent for treating tumour by amplifying  
CC mRNA from tumour and non-malignant tissues using a primer pair that  
CC hybridises to epidermal growth factor receptor (EGFR) and/or HER2-neu  
CC gene (i), quantitating and obtaining differential expression levels of  
CC amplified mRNA and comparing the differential expression levels and  
CC threshold levels for expression of (i). The method is useful for  
CC assessment of clinical treatment of a patient and as a diagnostic or  
CC prognostic tool for a range of cancers including breast, head and neck,  
CC lung, oesophageal and colorectal cancer. The present sequence is that of  
CC the human EGFR DNA sequence used in methods of the invention

DR New nucleic acid encoding mutant protein involved in synaptogenesis,
PT useful for treatment and diagnosis of e.g. autism, Asperger syndrome, and
PT schizophrenia.
XX Claim 10; SEQ ID NO 1; 416pp; French.
XX The invention relates to an isolated or purified polynucleotide encoding
XX a polypeptide (the wild-type form of which is involved in synaptogenesis)
XX that includes at least one mutation associated with development of
XX neurological disease and/or a predisposition to development of mental
XX disorders or psychiatric illness. The polypeptide are used to screen for
XX agents that modulate their activity. Also nucleic acid, polypeptide,
XX polypeptide-specific antibodies, vectors containing he nucleic acid and
XX host cells containing the vector, are useful as pharmaceuticals for
XX treating mental and neurological disorders, specifically autism, Asperger
XX syndrome, schizophrenia and attention deficit hyperactivity disorder. The
XX wild-type forms of the nucleic acid and polypeptide can be used
XX similarly. Also detecting mutations in the nucleic acid and polypeptide,
XX or measuring activity of the polypeptide, can be used to detect
XX biochemical disorders that affect formation of synapses and to diagnose
XX mental disease. This sequence corresponds to the genomic sequence of the
XX human wild type HNL4X gene.

XX
```

```
PS Claim 1; SEQ ID NO 17420; 71pp + Sequence Listing; English.
XX The present sequence is one of a large number of 5' ESTs derived from
XX mRNAs encoding secreted proteins. No ORF has yet been conclusively
XX identified within the present sequence. The 5' ESTs were prepared from
XX total human RNAs or polyA+ RNAs derived from 30 different tissues. EST
XX sequences usually correspond mainly to the 3' untranslated region (UTR)
XX of the mRNA because they are often obtained from oligo-dT primed cDNA
XX libraries. Such ESTs are not well suited for isolating cDNA sequences
XX derived from the 5' ends of mRNAs and even in those cases where longer
XX cDNA sequences have been obtained, the full 5' UTR is rarely included. 5'
XX ESTs are derived from mRNAs with intact 5' ends and can therefore be used
XX to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in
XX diagnostic, forensic, gene therapy and chromosome mapping procedures.

XX New flea protease genes and proteins - used in vaccine compositions for
XX the prophylaxis and treatment of flea infestation, especially in cats or
XX dogs.
XX Claim 1; Page 259; 318pp; English.
XX The present sequence is a DNA sequence from a novel flea serine protease.
XX The protease, its mimetopes, antibodies (Ab) and inhibitors of the
XX protein, as well as the DNA encoding the protein, may all be used in
XX therapeutic compositions to reduce flea protease activity (especially
XX immunoglobulin protease) and so reduce flea infestation, especially in
XX cats or dogs. Alternatively, flea larvae may ingest the faeces of adult
XX
```

CC fleas which comprises anti-protease antibodies produced by a host animal  
 CC in response to administration of the protein. Therapeutic compositions  
 CC may further comprise a compound that reduces haematophagous ectoparasite  
 CC burden by a method other than by reducing flea immunoglobulin protease  
 CC activity. The novel flea DNA encoding the protein can also be used to  
 CC produce recombinant protein, and fragments of it are used as probes and  
 CC primers for identification and isolation of related sequences, also as  
 CC antisense, triplex-forming agents and ribozymes for inhibition of the  
 CC synthesis of the protein. Ab are also useful for screening expression  
 CC libraries, to purify the protein and to target cytotoxins to fleas.  
 CC (Updated on 25-MAR-2003 to correct PI field.)

XX New isolated flea proteins with proteolytic activity, useful for  
 PT preventing and reducing flea infestations in mammals especially cats and  
 PT dogs.

XX Claim 4; Col 153-154; 150pp; English.

XX The present invention describes isolated flea serine protease,  
 CC aminopeptidase and cysteine protease proteins (I). Also described is a  
 CC method for identifying a compound (II) capable of inhibiting flea  
 CC protease activity comprising: (a) contacting (I) with a protease  
 CC substrate and a putative inhibitory compound, where (I) has proteolytic

CC activity in the absence of the compound; and (b) determining if the  
 CC compound inhibits protease activity by detecting cleavage of the protease  
 CC substrates; where decreased cleavage of the protease substrate indicates  
 CC an inhibitory compound. (I), nucleic acid molecules encoding (I), and  
 CC antibodies immunospecific for (I) and (II) are useful for preventing and  
 CC reducing flea infestations, particularly the species Ctenocephalides  
 CC felis (cat fleas), Ctenocephalides canis (dog fleas) and Pulex irritans,  
 CC in animals, preferably cats and dogs. They are also useful for reducing  
 CC infestation by other ectoparasites, preferably mosquitoes, midges,  
 CC sandflies, blackflies, ticks and Rhodnius. AAC90818 to AAC90913 and  
 CC AAB50551 to AAB50644 represent sequences used in the exemplification of  
 CC the present invention

XX Polynucleotide library used to determine cancerous states of mammalian  
 PT cells.

XX Claim 1; Page 275; 1097pp; English.

XX AAA00010 to AAA02716 represent polynucleotides isolated from cDNA  
 CC libraries constructed from human colon cancer cell lines. The present  
 CC invention also describes a method of detecting differentially expressed  
 CC genes correlated with a cancerous state of a mammalian cell, comprising  
 CC detecting at least one differentially expressed gene product in a test

CC sample derived from a cell suspected of being cancerous, where detection  
CC of the differentially expressed gene product is correlated with a  
CC cancerous state of the cell from which the test sample was derived. The  
CC polynucleotide sequences can be used in a method for detecting  
CC differentially expressed genes correlated with a cancerous state of a  
CC mammalian cell. The polynucleotides can also be used as probes for  
CC detecting and mapping related genes. They can be used in diagnosis and  
CC prognosis of diseases and disorders (e.g. identification of pre-  
CC metastatic or metastatic cancerous states, stages of cancer, or  
CC responsiveness of cancer to therapy). This is particularly for breast  
CC cancer, oestrogen receptor-positive breast cancer, oestrogen receptor-  
CC negative breast cancer, lung cancer, and colon cancer

XX Library of polynucleotides for diagnosing a cancerous state of a  
PT mammalian cell and detecting cancer, particularly of the colon or  
PT prostate, comprises 3351 human polynucleotide sequences.  
PT  
XX  
PS Claim 9; Page 784; 1046pp; English.  
XX  
XX The present sequence is one of 3351 sequences in a library of human  
CC polynucleotides. The library is used to detect differentially expressed  
CC genes correlated with a cancerous state of a mammalian cell and can  
CC detect colon, prostate, breast and lung cancer. The library can be used  
CC to produce probes for detection of mRNA and to produce additional copies  
CC of the polynucleotides. The probes can be used for chromosome mapping of  
CC the polynucleotide and for detection of transcription levels. Ribozymes  
CC or antisense oligonucleotides can be generated. The polynucleotides and  
CC their gene products are used as genetic or biochemical markers (e.g. in

CC blood or tissues) that will detect the earliest changes along the  
CC carcinogenesis pathway and/or monitor the efficacy of therapies and  
CC preventive interventions. The polynucleotides, polypeptides and  
CC antibodies against them can be used in pharmaceutical compositions to  
CC treat the cancers and proliferative disorders such as neoplasia,  
CC dysplasia and hyperplasia

XX  
XX The invention relates to human polynucleotides (AAI79941-AAI93841) and  
CC the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to  
CC cytokine, cell proliferation or cell differentiation or which may induce  
CC production of other cytokines in other cell populations. The  
CC polynucleotides and polypeptides are useful in gene therapy, vaccines or  
CC peptide therapy. The polypeptides have various cytokine-like activities,  
CC e.g. stem cell growth factor activity, haematopoiesis regulating  
CC activity, tissue growth factor activity, immunomodulatory activity and  
CC activin/inhibin activity and may be useful in the diagnosis and/or  
CC treatment of cancer, leukaemia, nervous system disorders, arthritis and  
CC inflammation. Note: The sequence data for this patent did not form part  
CC of the printed specification, but was obtained in electronic format  
CC directly from Wipo at ftp.wipo.int/pub/published\_pct\_sequences

cDNA library was prepared and sequenced in Mouse Genome  
Encyclopedia Project of Genome Exploration Research Group in Riken  
Genomic Sciences Center and Genome Science Laboratory in RIKEN.  
Division of Experimental Animal Research in Riken contributed to  
prepare mouse tissues. First strand cDNA was primed with a primer  
[5'-GAGAGAGAGAGATCCAGAGCTCTTTTCTTTTCTTNN 3'], cDNA was  
prepared by using trehalose thermo-activated reverse transcriptase  
and subsequently enriched for full-length by cap-trapper. Second  
strand cDNA was prepared with the primer adapter of sequence [5',  
GAGAGAGAGCGCCGCAATTAATTCGAGTTAATTAATTAATTCCTCCCTCC 3']. cDNA  
was cleaved with XhoI and SstI. Cloning sites, 5' end: XhoI; 3'  
end: SstI. Host: SOLR.

The sequence contained an oligo-dT track that was present in the  
oligonucleotide that was used to prime the synthesis of first  
strand cDNA and therefore this may represent a bonafide poly A  
tail. The sequence tag present in the cDNA between the NotI site  
and the oligo-dT track served to verify it as a clone from the  
non-normalized rat eye library cDNA library preparation: M.B.

/notes="Vector: pT73D-Pac (Pharmacia) with a modified
polylinker; Site_1: Not I; Site_2: Eco RI; The UI-R-AI
library is a subtracted library derived from the UI-R-A0
library. The UI-R-A0 library consisted of a mixture of
individually tagged normalized libraries constructed from
rat placenta, adult lung, brain, liver, kidney, heart,
spleen, ovary, and muscle. The tag is a string of 3-5'
nucleotides present between the Not I site and the
oligo-dr track which allows identification of the library
of origin of a clone within the mixture. The subtracted
library (UI-R-AI) was constructed as follows: PCR
amplified cDNA inserts from a pool of approximately 3,840
UI-R-A0 clones from which 3' ESTs had been derived was
used as a driver in a hybridization with the UI-R-A0
library in the form of single-stranded circles. The
remaining single-stranded circles (subtracted library) was
purified by hydroxyapatite column chromatography,
converted to double-stranded circles and electroporated
into DH10B bacteria (Life Technologies) to generate the
UI-R-AI library. This procedure has been previously
described (Bonaldo, Lennon and Soares, Genome Research 6:
791-806, 1996)"

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the non-normalized rat eye library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com)

Seq primer: M13 Forward

POLYA=Yes.

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the non-normalized rat eye library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com)

Seq primer: M13 Forward

POLYA=Yes.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

3 (bases 1 to 246494)  
Rat Genome Sequencing Consortium.  
Direct Submission  
Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 15, 2002 this sequence version replaced gi:23611251.  
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Project Information  
Center project name: GWKZ  
Center clone name: CH230-272K4  
----- Summary Statistics

Assembly program: Phrap; version 0.990329  
Consensus quality: 202515 bases at least Q40  
Consensus quality: 207572 bases at least Q30  
Consensus quality: 211369 bases at least Q20  
Estimated insert size: 205757; sum-of-contigs estimation  
Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

-----  
\* NOTE: Estimated insert size may differ from sequence length  
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank\_draft\_data.html).  
\* NOTE: This is a 'working draft' sequence. It currently consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Direct Submission

Submitted (07-APR-2005) The Institute for Genomic Research, 9712

Medical Center Dr, Rockville, MD 20850, USA, nelsayed@igr.org

On Apr 7, 2005 this sequence version replaced gi:19774505.

BAC clone RPI93-27M3 from Trypanosoma brucei chromosome 5.

Putative protein coding regions (>30 codons) were predicted by

combining the output of the gene finding algorithm GLIMMER with

similarity data and manual annotation of open reading frames.

Further refinement of gene models (additions, deletions and

alterations to boundary coordinates) were done manually based on

detailed comparisons with the T. cruzi and L. major genomes. Genes

on BACs were assigned a systematic name based on the chromosome and

the BAC from which they originated (e.g. Tb03.27F10.410). Gene

products were assigned a putative function when they shared

significant similarity with experimentally characterized gene

products or when they contained functionally known protein domains.

Gene products were labelled either 'hypothetical protein', or

'hypothetical protein, conserved' in the case of products showing

significant similarity with proteins of unknown function

from other organisms. Gene products of unknown function with

predicted orthologs in Trypanosoma cruzi and Leishmania major

genomes were automatically classified as conserved proteins. Short

predicted coding sequences (less than 150 codons) with no additional evidence of coding potential were labelled 'hypothetical protein, unlikely'.

Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: <http://image.llnl.gov>  
Series: IRAK Plate: 157 Row: a Column: 21  
This clone was selected for full length sequencing because it passed the following selection criteria: Similarity but not identity to protein.

Direct Submission  
Submitted (18-JUN-2005) Human Genome Sequencing Center, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
On Jun 18, 2005 this sequence version replaced gi:60735107.  
Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.

The repeat regions shown were identified using RepeatMasker by Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui Zhang.

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

Contact: nisc.zoo@nih.gov  
----- Project Information  
Center project name: flyg  
Center clone name: 030P02

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics  
Sequencing vector: plasmid; n/a; 100% of reads  
Chemistry: Dye-terminator Big Dye; 100% of reads  
Assembly program: Phrap; version 0.950319  
Consensus quality: 162694 bases at least Q40  
Consensus quality: 162942 bases at least Q30  
Consensus quality: 163053 bases at least Q20  
Insert size: 149000; agarose-fp  
Insert size: 163116; sum-of-contigs  
Quality coverage: 11.40x in Q20 bases; agarose-fp  
Quality coverage: 10.42x in Q20 bases; sum-of-contigs

-----  
\* NOTE: This is a 'working draft' sequence. It currently consists of 9 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.  
\* This sequence will be replaced  
\* by the finished sequence as soon as it is available and  
\* the accession number will be preserved.  
\* 1 10164: contig of 10164 bp in length  
\* 10165 10264: gap of unknown length  
\* 10265 13805: contig of 3541 bp in length  
\* 13806 13905: gap of unknown length  
\* 13906 16621: contig of 2716 bp in length  
\* 16622 16721: gap of unknown length  
\* 16722 60680: contig of 43959 bp in length  
\* 60681 60780: gap of unknown length  
\* 60781 78425: contig of 17645 bp in length  
\* 78426 78526: gap of unknown length  
\* 78527 100161: contig of 21636 bp in length  
\* 100162 100261: gap of unknown length  
\* 100262 103084: contig of 2823 bp in length  
\* 103085 103184: gap of unknown length  
\* 103185 105651: contig of 2467 bp in length  
\* 105652 105751: gap of unknown length  
\* 105752 163916: contig of 58165 bp in length.

sequencing project.  
 This sequence is from the  
 BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection,  
 from a library constructed by Elizabeth Bosch. cDNA was prepared  
 from RNA extracted from chondrocytes isolated from growth plates,  
 normalised,  
 and poly A-trimmed. EcoRI-NotI cut cDNA was then ligated into the  
 vector. Vector: pBluescript II KS(+); Site\_1: EcoRI; Site\_2: NotI  
 Host: Escherichia coli DH10B.

RESULT 15			
AC141049			
LOCUS	AC141049		
DEFINITION	Rattus norvegicus clone CH230-418A3, *** SEQUENCING IN PROGRESS		
VERSION	AC141049.1 GI:28875908		
KEYWORDS	HTG; HTGS_PHASE1.		
SOURCE	Rattus norvegicus (Norway rat)		
ORGANISM	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Sciurognathi; Muroidea; Muridae; Murinae; Rattus.		

Chemistry: Dye-terminator Big Dye; 100% of reads

Assembly program: Phrap; version 0.990329

Consensus quality: 79468 bases at least Q40

Consensus quality: 87434 bases at least Q30

Consensus quality: 93152 bases at least Q20

Estimated insert size: 71600; sum-of-contigs estimation

Quality coverage: 1x in Q20 bases; sum-of-contigs estimation

-----  
\* NOTE: Estimated insert size may differ from sequence length  
(see [http://www.hgsc.bcm.tmc.edu/docs/genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)).

\* NOTE: This is a 'working draft' sequence. It currently

\* consists of 54 contigs. The true order of the pieces

\* is not known and their order in this sequence record is

\* arbitrary. Gaps between the contigs are represented as

\* runs of N, but the exact sizes of the gaps are unknown.

\* This record will be updated with the finished sequence.

\* as soon as it is available and the accession number will

\* be preserved.

\* 1 1064: contig of 1064 bp in length  
\* 1065 1164: gap of unknown length  
\* 1166 2209: contig of 1045 bp in length  
\* 2210 2309: gap of unknown length  
\* 2310 3382: contig of 1073 bp in length

Center project name: L32177  
Center clone name: 276\_K\_18

\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 2 contigs. Gaps between the contigs  
\* are represented as runs of N. The order of the pieces  
\* is believed to be correct as given, however the sizes  
\* of the gaps between them are based on estimates that have  
\* been provided by the submittor.  
\* This sequence will be replaced  
\* by the finished sequence as soon as it is available and  
\* the accession number will be preserved.  
\* 115321 115420: contig of 115320 bp in length  
\* 115321 115420: gap of unknown length  
\* 115421 157085: contig of 41665 bp in length.  
Location/Qualifiers

numbers given in the feature table with their source databases:
Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-86013 is
from the RPCI-23 Mouse BAC Library
constructed by the group of Pieter de Jong.
For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBACe3.6
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.

On Jun 29, 2005 this sequence version replaced gi:66796257.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

----- Summary Statistics -----
Sequencing vector: M13; 0%
Chemistry: Dye-terminator ET; 0% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 228476 bases at least Q40
Consensus quality: 228826 bases at least Q30
Consensus quality: 229089 bases at least Q20
Insert size: 202000; agarose-fp
Insert size: 235563; sum-of-contigs
Quality coverage: 11.98 in Q20 bases; agarose-fp
Quality coverage: 11.18 in Q20 bases; sum-of-contigs

* NOTE: This is a 'working draft' sequence. It currently
* consists of 5 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*
* 1343: contig of 1343 bp in length
* 1344: gap of unknown length
* 1444: contig of 1512 bp in length
* 2956: gap of unknown length
* 3056: contig of 23876 bp in length
* 26931: gap of unknown length
* 27032: contig of 60137 bp in length
* 87168: gap of unknown length
* 87269: contig of 143183 bp in length.

Submitted (05-MAY-2003) The Institute for Genomic Research, 9712
Medical Center Dr, Rockville, MD 20850, USA
This is the pseudomolecule for rice chromosome 10, which was
constructed by resolving discrepancies between overlapping BACs,
trimming the overlap regions, and linking the unique sequences to
form a contiguous sequence. Genes in individual BAC clone were
identified by a combination of several methods: Gene prediction
programs, searches of the complete sequence against a peptide
database and EST databases. Genes with similarity to other proteins
are named after the database hits. Genes without significant
peptide similarity but with EST similarity are named as unknown
proteins. Genes without protein or EST similarity, that are
predicted by more than two gene prediction programs over most of
their length are annotated as hypothetical proteins. Genes
encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy,
http://genome.wustl.edu/eddy/tRNAscan-SE/).
http://genome.wustl.edu/eddy/tRNAscan-SE/).

AY374527 1824 bp RNA linear VRL 24-JAN-2005

Borna disease virus isolate H3519 N protein, X protein, and P

protein genes, complete cds.

## ACCESSION

AY374527

AY374527.1 GI:40018885

## KEYWORDS

Borna disease virus

Borna disease virus

Viruses; ssRNA negative-strand viruses; Mononegavirales;

Bornaviridae; Bornavirus.

1 (bases 1 to 1824)

Kolodziejek, J., Durrwald, R., Herzog, S., Ehrensperger, F., Lussy, H.

and Nowotny, N.

Genetic clustering of Borna disease virus natural animal isolates,

laboratory and vaccine strains strongly reflects their regional

geographical origin

J. Gen. Virol. 86 (PT 2), 385-398 (2005)

15659758

2 (bases 1 to 1824)

## COMMENT

----- Genome Center

Center: Baylor College of Medicine

Center code: BCM

Web site: <http://www.hgsc.bcm.tmc.edu/>

Contact: [hgsc-help@bcm.tmc.edu](mailto:hgsc-help@bcm.tmc.edu)

----- Project Information

Center project name: KZU

Center clone name: CH230-unknown

----- Summary Statistics

Sequencing vector: Plasmid;

Chemistry: Dye-terminator Big Dye; 100% of reads

Assembly program: Phrap; version 0.990329

Consensus quality: 35269 bases at least Q40

Consensus quality: 38450 bases at least Q30

Consensus quality: 41455 bases at least Q20

Estimated insert size: 25179; sum-of-contigs estimation

Quality coverage: 0x in Q20 bases; sum-of-contigs estimation

-----

\* NOTE: Estimated insert size may differ from sequence length

\* (see [http://www.hgsc.bcm.tmc.edu/docs/Genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)).

\* NOTE: This is a 'working draft' sequence. It currently

\* consists of 23 contigs. The true order of the pieces

\* is not known and their order in this sequence record is

\* arbitrary. Gaps between the contigs are represented as

\* runs of N, but the exact sizes of the gaps are unknown.

\* This record will be updated with the finished sequence

\* as soon as it is available and the accession number will

\* be preserved.

\* 1 1121: contig of 1121 bp in length

\* 1122: gap of unknown length

\* 1222: contig of 1051 bp in length

\* 2273: gap of unknown length

\* 3749: contig of 1377 bp in length

 -----  
 Sequence Quality Assessment:  
 This entry has been annotated with sequence quality  
 estimates computed by the Phrap assembly program.  
 All manually edited bases have been reduced to quality zero.  
 Quality levels above 40 are expected to have less than  
 1 error in 10,000 bp.  
 Base-by-base quality values are not generally visible from the  
 Genbank flat file format but are available as part  
 of this entry's ASN.1 file.  
 -----  
 This sequence was finished as follows unless otherwise noted:  
 all regions were either double-stranded or sequenced with an  
 alternate chemistry or covered by high quality data (i.e., Phred  
 quality > 30); an attempt was made to resolve all sequencing  
 problems, such as compressions and repeats; all regions were  
 covered by at least one plasmid subclone or more than one M13  
 subclone; and the assembly was confirmed by restriction digest.  
 -----  
 Sequence Validation:  
 This sequence has been validated by Multiple Complete Digest  
 fingerprinting. Comparison of the experimentally derived digest  
 fragments with sequence-predicted fragments is given below.  
 The electronically-digested sequence consists of both insert and  
 vector, in order to accurately represent the entire circular BAC.  
 Small fragments below a variable cutoff (approximately 400-800 bp)  
 are not resolved in the fingerprint and hence do not appear  
 in the table. There are no significant remaining discrepancies  
 between the experimental and predicted values. Uniquely ordered  
 fragments are separated by dashed lines.

Direct Submission  
Submitted (09-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

#### COMMENT

On May 10, 2003 this sequence version replaced gi:24818522. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold,

individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

XX	
XX	Claim 12; 56pp + Sequence Listing; 56pp; German.
XX	
XX	This invention describes a novel method for determining the degree of
XX	methylation of a particular cytosine in a motif 5'-CpG-3', present in a
XX	genomic sample of DNA. The sample is treated chemically to convert
XX	cytosine (C) but not methylated C, to uracil, then part of the genomic
XX	DNA that contains the target C is amplified to form a labeled amplicon.
XX	The amplicon is hybridised to two classes, each with at least one member,
XX	of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
XX	degree of hybridisation to both classes is determined from the label on
XX	the amplicon. From the ratio of labels hybridised to the two classes of
XX	oligomers, the degree of methylation is calculated. The method is used:
XX	(i) for diagnosis and/or prognosis of side effects of therapeutic drugs
XX	and of a wide range of diseases, e.g. cancer, disorders of the central
XX	nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
XX	particularly by detecting mutations or single nucleotide polymorphisms
XX	(SNP's); and (ii) for differentiation of cell or tissue types and for
XX	investigating cell differentiation. The method allows the methylation
XX	status of many C residues to be determined simultaneously. ABQ1410-
XX	ABQ54121 represent genomic DNA sequences used to illustrate the method
XX	for determining the degree of cytosine methylation described in the
XX	disclosure of the invention

XX Nucleic acid array containing Xenopus embryonic nucleic acids is useful  
PT to identify genes involved in embryonic development, to identify  
PT different types of embryonic cells, and to diagnose developmental  
PT disorders.

XX Claim 1; Page 42; 823pp; English.

XX The invention relates to a nucleic acid array, where each coordinate  
CC contains a single nucleic acid species having one of 770 nucleotide  
CC sequences (appearing as ABS76747-ABS77516) a of a xenopus embryonic gene  
CC product, or its complement or hybridisable fragment of not less than 20  
CC contiguous nucleotides of one of those sequences. Also included are  
CC detecting differential expression of embryonic genes, comprising: (a)  
CC contacting a nucleic acid array comprising genes expressed in embryonic  
CC but not mature cells with nucleic acids from sample and control cells;  
CC and (b) detecting differential hybridisation of nucleic acids from the  
CC sample cells relative to the control cells; and detecting defects in  
CC development, comprising: (a) contacting nucleic acids from test cells  
CC undergoing development with a nucleic acid array of gene products known  
CC to play a fundamental role in the development process; and (b) detecting  
CC a difference in expression of a fundamental gene in the sample cells  
CC relative to a standard. The invention is useful to identify genes  
CC involved in embryonic development and related processes such as cell  
CC differentiation. This would be useful for diagnosing developmental  
CC disorders and for identifying different types of embryonic cells. The  
CC present sequence is one of the 770 Xenopus embryonic cDNA sequences

XX
XX Monitoring differential expression of several genes in first Bacillus
XX cell relative to expression of same genes in one or more second Bacillus
XX cells, by using substrate containing Bacillus genomic sequenced tag
XX array.
XX
XX Claim 4; SEQ ID NO 893; 200pp; English.
XX
XX The invention describes a method of monitoring differential expression of
XX genes in a first Bacillus cell relative to expression of the genes in
XX other Bacillus cells, comprising hybridising labelled nucleic acid probes
XX isolated from Bacillus cells to a substrate containing array of Bacillus
XX genomic sequenced tags (GST), examining the array, and determining
XX
relative gene expression by an observed hybridisation reporter signal of
a spot in the array. The method is useful for measuring the expression of
genes in a first Bacillus cell relative to expression of the same genes
in one or more second Bacillus cells. The method is useful for monitoring
global expression of several genes from a Bacillus cell, discovering new
genes, identifying possible functions of unknown open reading frames and
monitoring gene copy number variation and stability. Monitoring changes
in expression of genes may be used to provide a representation of the way
in which Bacillus cells adapt to changes in culture conditions,
environmental stress or other physiological provocation. Extensive follow
up characterisation is unnecessary, when one spot on an array equals one
gene or one open reading frame, since sequence information is available.
This sequence represents a genomic sequence tag (GST) used in the method
of the invention. Note: The sequence data for this patent did not form
part of the printed specification, but was obtained in electronic format
directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX New mutant Bacillus licheniformis host cell secreting 5 % less of one or
XX more secreted polypeptides than the parent host cell, useful for
XX producing a product of interest e.g. polypeptides, amino acids or
XX carbohydrates.
XX
XX Disclosure; SEQ ID NO 23; 422pp; English.
XX
XX This invention relates to a novel Bacillus licheniformis (B.
XX licheniformis) mutant host cell derived from a parent B. licheniformis
XX host cell that is mutated in genes encoding secreted polypeptides. host
XX Specifically, it refers to the generation of an improved Bacillus host
XX cell that reduces the need for product purification caused by contaminant
XX secreted native polypeptides in the culture medium. Accordingly, the
XX present invention describes reducing the expression of these native
```

CC proteins (e.g. proteolytic enzymes, nutrient uptake factors and signal  
 CC molecule), which in turn makes it easier to purify the heterologous  
 CC product of interest and therefore improving the production process.  
 CC Further benefits of a mutated host cell include an increase in total  
 CC production yield and a longevity of shelf life attributable to improved  
 CC product stability and purity. This polynucleotide is a DNA sequence  
 CC encoding a mutant B. licheniformis secreted polypeptide of the invention.

XX Determining the degree of cytosine methylation in genomic DNA, useful for  
 PT diagnosis and prognosis, comprises selective hybridization of amplicons  
 PT from chemically treated DNA.

XX Claim 12; 56pp + Sequence Listing; 56pp; German.

XX This invention describes a novel method for determining the degree of  
 CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a  
 CC genomic sample of DNA. The sample is treated chemically to convert  
 CC cytosine (C) but not methylated C, to uracil, then part of the genomic  
 CC DNA that contains the target C is amplified to form a labeled amplicon.  
 CC The amplicon is hybridised to two classes, each with at least one member,  
 CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the

CC degree of hybridisation to both classes is determined from the label on  
 CC the amplicon. From the ratio of labels hybridised to the two classes of  
 CC oligomers, the degree of methylation is calculated. The method is used:  
 CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs  
 CC and of a wide range of diseases, e.g. cancer, disorders of the central  
 CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,  
 CC particularly by detecting mutations or single nucleotide polymorphisms  
 CC (SNP's); and (ii) for differentiation of cell or tissue types and for  
 CC investigating cell differentiation. The method allows the methylation  
 CC status of many C residues to be determined simultaneously. ABQ13410-  
 CC ABQ54121 represent genomic DNA sequences used to illustrate the method  
 CC for determining the degree of cytosine methylation described in the  
 CC disclosure of the invention

XX
XX New recombinant DNA construct comprising a promoter positioned to provide
PT for expression of a polynucleotide encoding a polypeptide from a
PT microbial source, useful for producing plants with improved properties.
XX
XX Claim 1; SEQ ID NO 43475; 122pp; English.
XX
XX The invention relates to a recombinant DNA construct comprising a
CC promoter functional in a plant cell, where the promoter is positioned to
CC provide for expression of a polynucleotide encoding a polypeptide from a
CC microbial source. The invention also relates to a transformed plant
CC comprising the recombinant DNA construct and a method of producing a
CC transformed plant having an improved property. The plant is a crop plant
CC such as maize or soybean. The method of producing a transformed plant
CC having an improved property comprises transforming a plant with the
CC recombinant DNA construct and growing the transformed plant, where the
CC polynucleotide or polypeptide is useful for improving plant properties.
CC The recombinant DNA construct is useful for producing plants with
CC improved plant properties, e.g. improved cold, heat or drought tolerance,
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification
CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production. This sequence represents a bacterial polynucleotide used in
CC the scope of the invention. Note: The sequence data for this patent did
CC not form part of the printed specification but was obtained in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

XX
XX New stress-responsive nucleic acid, useful for altering the
PT responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT stress, salt stress or osmotic stress.
XX
XX Claim 48; SEQ ID NO 17318; 89pp; English.
XX
XX The invention relates to novel abiotic stress responsive polynucleotides
CC and polypeptides. Also disclosed are vectors, expression cassettes, host
CC cells, and plants containing such polynucleotides. Also disclosed are
CC methods for using the polynucleotides and polypeptides to alter the
CC responsiveness of a plant to abiotic stress. The invention is useful in
CC agriculture. The nucleic acid is useful for determining whether a test
CC plant has been exposed to an abiotic stress condition. It is also useful
CC for selecting an agent that alters abiotic stress regulated
CC polynucleotide expression in a plant cell, and to identify a homolog or
CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC molecule and the polypeptide encoded by it are useful in altering the
CC responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC stress, osmotic stress or any of their combinations. The present sequence
CC is used in the exemplification of the invention

 XX  
 XX Disclosure; Page 127-131; 147pp; Japanese.  
 XX  
 CC The invention comprises a method of estimating gene expression in a  
 CC chosen organ of a plant. The method involves searching sequences in the  
 CC neighbourhood of putative protein-encoding regions of genes expressed in  
 CC the organ which are homologous to a known transposon key sequence, and  
 CC then selecting for genes in which these sequences are present. The method  
 CC of the invention is useful for establishing the pattern of gene  
 CC expression in particular organs of a plant (e.g. the flower) in  
 CC connection with the improvement of varieties of rice and other plants and  
 CC modification of the structural form and appearance of flowers. The  
 CC present DNA sequence was used in the exemplification of the invention.

XX
XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX Rosen CA, Barash SC, Ruben SM;
XX WPI; 2001-483426/52.
XX
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
XX useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
XX Disclosure; SEQ ID NO 39708; 3071pp + Sequence Listing; English.
XX
XX AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I)
XX amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic
XX activity, and can be used in gene therapy and vaccine production. (I)
XX proteins and polynucleotides may be used in the prevention, diagnosis and
XX treatment of diseases associated with inappropriate (I) expression. For
XX example, they may be used to treat disorders associated with decreased
XX expression by rectifying mutations or deletions in a patient's genome
XX that affect the activity of (I) by expressing inactive proteins or to
XX supplement the patients own production of (I). Additionally, (I)
XX polynucleotides may be used to produce the secreted (I), by inserting the
XX nucleic acids into a host cell and culturing the cell to express the
XX protein. (I) proteins and polynucleotides may be used to prevent,
XX diagnose and treat immune/hematopoietic-related diseases, especially
XX cancers and cancer metastases of hematopoietic-derived cells. AAK64703
XX to AAK87694 represent human immune/hematopoietic antigen genomic
XX sequences from the present invention. AAK54942 to AAK54950 and AAK82169
XX represent sequences used in the exemplification of the present invention

PT
XX Claim 1; SEQ ID NO 604; 2686pp; English.
XX PS
XX This invention relates to novel, isolated full length human cDNA
CC molecules and the encoded proteins thereof. Specifically, it refers to
CC cDNA clones obtained by an oligo-capping method, where none of these
CC clones are identical to any known human mRNAs. The present invention
CC describes an immunoassay to identify agonists and antagonists, as well as
CC antibodies, antisense molecules and siRNAs that can all be used to bind
CC to and modulate expression of the cDNA molecules. As such, these
CC molecules are useful for diagnostic markers or therapeutic targets for
CC the various diseases or morbid states. In particular, they are useful in
CC gene therapy for treating osteoporosis, neurological disease, Alzheimer's
CC disease, Parkinson's disease, dementia, short memory and various cancers,
CC as well as for maintaining equilibrium of sense or motor function, and
CC for treating emotional reaction, fear response and panic. Accordingly,
CC they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian,
CC cytostatic and tranquiliser activities. This polynucleotide is a full
CC length human cDNA sequence of the invention. NOTE: This sequence is not
CC given in the sequence listing of the specification but can be obtained on
CC CD-ROM from the European Patent Office, Vienna Sub-office.
XX CD-ROM from the European Patent Office, Vienna Sub-office.

XX KW
XX New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity.
XX PS
XX Claim 1; SEQ ID NO 825; 103pp; English.
XX CC
XX The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC sequences. (I) is useful as hybridisation probes, polymerase chain
CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping.
CC and in recombinant production of (II). The polynucleotides are also used
CC in diagnostics as expressed sequence tags for identifying expressed
CC genes. (I) is useful in gene therapy techniques involving (II). (II) is
CC activity of (II) or to treat disease states involving (II). (II) is
CC useful for generating antibodies against it, detecting or quantitating a
CC polypeptide in tissue, as molecular weight markers and as a food
CC supplement. (II) and its binding partners are useful in medical imaging
CC of sites expressing (II). (I) and (II) are useful for treating disorders
CC involving aberrant protein expression or biological activity. The
CC polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC coding sequences of the invention. Note: The sequence data for this
CC patent did not appear in the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX Novel isolated nucleic acid construct comprising sequence that encodes
XX PT long terminal repeat retrotransposon, useful for modifying genome,
XX PT conforming dislocation capability of retrotransposon or producing
XX PT transgenic organism.
XX
XX Claim 8; SEQ ID NO 1; 129pp; Japanese.
XX
XX The invention relates to an isolated nucleic acid construct comprising a
XX CC sequence that encodes a long terminal repeat (LTR) retrotransposon. The
XX CC construct is useful for modifying a genome. The foreign gene is arranged
XX CC in the reverse transcription direction of retrotransposon. The foreign
XX CC gene encodes a factor that provides resistance to antibiotics, nutrition
XX CC replenishment factor, enzyme or fluorescent. The construct is useful for
XX CC conforming whether the retrotransposon has dislocation capability. The
XX CC step of detection involves obtaining sequence obtained by ligation
XX CC mediated PCR and comparing the genomic database with the obtained
XX CC sequence. The construct is useful for producing transgenic organism. The
XX CC construct is useful for rearranging the foreign gene or transducing a
XX CC foreign gene into a host. The construct enables efficient modification of
XX CC a genome. The present sequence represents a long terminal repeat (LTR)
XX CC retrotransposon associated DNA.

XX WPI; 2001-483426/52.  
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,  
PT useful for preventing, diagnosing and/or treating cancers and metastasis.  
XX Disclosure; SEQ ID NO 41861; 3071pp + Sequence Listing; English.  
XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)  
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic  
CC activity, and can be used in gene therapy and vaccine production. (I)  
CC proteins and polynucleotides may be used in the prevention, diagnosis and  
CC treatment of diseases associated with inappropriate (I) expression. For  
CC example, they may be used to treat disorders associated with decreased  
CC expression by rectifying mutations or deletions in a patient's genome  
CC that affect the activity of (I) by expressing inactive proteins or to  
CC supplement the patients own production of (I). Additionally, (I)  
CC polynucleotides may be used to produce the secreted (I), by inserting the  
CC nucleic acids into a host cell and culturing the cell to prevent the  
CC protein. (I) proteins and polynucleotides may be used to prevent,  
CC diagnose and treat immune/haematopoietic-related diseases, especially  
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703  
CC to AAK97694 represent human immune/haematopoietic antigen genomic  
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169  
CC represent sequences used in the exemplification of the present invention

XX
XX Polynucleotides encoding digestive system antigens, useful for
PT diagnosing, treating, preventing and/or prognosing disorders of the
PT digestive system, particularly cancer and cancer metastases.
XX
XX Disclosure; SEQ ID NO 3915; 986pp; English.
XX
XX The present invention provides the protein and coding sequences of a
CC number of human digestive system antigens. These can be used in the
CC diagnosis, treatment and prevention of digestive system disorders,
CC including cancer, Meckel's diverticulum, bacterial or parasitic
CC infections, appendicitis, Hirschsprung's disease, chronic colitis or
CC ulcerative colitis. The present sequence is a genomic DNA fragment
CC encoding a digestive system antigen of the invention

(HUMA-) HUMAN GENOME SCI INC.  
XX  
PI Rosen CA, Barash SC, Ruben SM;  
XX WPI; 2001-457727/49.  
XX Isolated polypeptide for treating, preventing and/or prognosing  
PT disorders related to the colon and rectum including colorectal cancers  
PT and also for testing and detection e.g. diagnosis.  
XX Disclosure; SEQ ID NO 247; 522pp + Sequence Listing; English.  
XX The present invention provides the protein and coding sequences of a  
CC number of colorectal cancer antigens. These are shown in AA157547-  
CC AA757619 and AA38569-AA38641. These can be used in the diagnosis,  
CC prevention and treatment of cancer of the colon and/or rectum. The  
CC present sequence is a colorectal cancer antigen genomic sequence. Note:  
CC The sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pct\_sequences

DR  
XX New colorectal cancer polypeptide for diagnosing, prognosing, preventing,  
PT and treating immune, hyperproliferative, liver, kidney, reproductive  
PT disorders and for identifying modulators of therapeutic use.  
XX Disclosure; SEQ ID NO 247; 183pp; English.  
PS  
XX The present invention relates to the isolation of novel human colorectal  
CC cancer related proteins, and polynucleotide sequences encoding them. The  
CC sequences of the invention are useful in the diagnosis, treatment,  
CC prevention and/or prognosis of the colon and/or rectum, including  
CC colorectal cancer, colorectal cancer metastases, and gastrointestinal

CC disorders such as dysphagia, peptic oesophagitis, gastric reflux,  
 CC irritable bowel syndrome, and peritoneal diseases. The invention also  
 CC describes antibodies that bind colorectal cancer related proteins,  
 CC vectors, host cells, and recombinant and synthetic methods for producing  
 CC human colorectal cancer related polynucleotides, polypeptides, and/or  
 CC antibodies. ABS99797-ABS99974 represent genomic sequences encoding human  
 CC colorectal cancer related proteins. Note: The sequence data for this  
 CC patent did not form part of the printed specification, but was obtained  
 CC in electronic format directly from the USPTO web site at  
 CC seqdata.uspto.gov/psipdDentry.html

 XX Disclosure; SEQ ID NO 247; 179pp; English.  
 PS  
 XX The invention relates to a colorectal cancer antigen. The antigen is  
 CC useful for chromosome identification, chromosome mapping, radiation  
 CC hybrid mapping or gene therapy, or as hybridisation probes for  
 CC differential identification of the tissues or cell types present in a  
 CC biological sample. The antigen is useful for treating, preventing,  
 CC diagnosing and/or prognosing gastrointestinal disorders, including  
 CC inflammatory diseases and/or conditions, infections, cancers (e.g.  
 CC intestinal neoplasms (carcinoid tumour of the small intestine, non-  
 CC Hodgkin's lymphoma of the small intestine, small bowel lymphoma)) and  
 CC ulcers (e.g. peptic ulcers). The antigen and its nucleic acid are useful  
 CC to provide immunological probes for differential identification of the  
 CC tissue. The antigen and its nucleic acid are useful for treating,  
 CC preventing, diagnosing and/or prognosing diseases, disorders and/or

CC conditions of the immune system e.g. Bruton's disease, X linked infantile  
 CC agammaglobulinaemia, severe combined immunodeficiencies, DiGeorge  
 CC anomaly, etc. The antigen and its nucleic acid is useful for treating,  
 CC preventing and/or diagnosing hyperproliferative disorders (e.g. acute  
 CC lymphoblastic leukaemia, acute lymphocytic leukaemia, etc), urinary

XX Disclosure; SEQ ID NO 849; 182pp; English.  
PS The invention relates to cancer-associated proteins (CAP) and the cancer-  
CC associated (CA) nucleic acids encoding them. The invention also relates  
CC to a method for treating cancers involving administering to a patient an  
CC inhibitor of CAP, and a method of screening for anticancer activity in a  
CC potential drug involving providing a cell that expresses a CA gene,  
CC contacting a tissue sample derived from a cancer cell with an anticancer  
CC drug candidate and monitoring the effect of the anticancer drug candidate  
CC on expression of the CA gene. The CAP proteins are useful for detecting  
CC cancer associated with expression of a CAP protein in a test cell sample  
CC and for screening for a bioactive agent capable of modulating the  
CC activity of a CAP protein. The CA nucleic acids are useful for diagnosing  
CC cancer, involving determining the expression of a CA nucleic acid in a  
CC tissue. This sequence represents a murine CA gene of the invention. Note:  
CC The sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO

DR New polynucleotides and polypeptides for predicting the activity of  
XX compounds that interact with protein tyrosine kinases and/or protein  
XX tyrosine kinase pathways.  
XX Claim 2; SEQ ID NO 146; 139pp; English.  
XX The present invention describes a predictor set comprising a plurality of  
XX polynucleotides or polypeptides whose expression pattern is predictive of  
XX the response of cells to treatment with a compound that modulates protein  
XX tyrosine kinase activity or members of the protein tyrosine kinase  
XX pathway. Also described: (1) predicting whether a compound is capable of  
XX modulating the activity of cells, comprising obtaining a sample of cells,  
XX determining whether the cells express a plurality of markers, and  
XX correlating the expression of the markers to the compound's ability to  
XX modulate the activity of the cells; (2) a plurality of cell lines for  
XX identifying polynucleotides and polypeptides whose expression levels  
XX correlate with compound sensitivity or resistance of cells associated  
XX with a disease state; and (3) identifying polynucleotides and  
XX polypeptides that predict compound sensitivity or resistance of cells  
XX associated with a disease state, comprising subjecting the plurality of  
XX cell lines to one or more compounds, analysing the expression pattern of  
XX a microarray of polynucleotides or polypeptides, and selecting  
XX resistance of cells associated with a disease state by using the  
XX expression pattern of the microarray. The polynucleotides and  
XX polypeptides have cytostatic activities, and can be used in gene therapy.  
XX The polynucleotides and polypeptides are useful in predicting the  
XX activity of compounds that interact with protein tyrosine kinases and/or  
XX protein tyrosine kinase pathways. These may be used in determining drug  
XX sensitivity in patients to allow the development of individualized  
XX genetic profiles which aid in treating diseases and disorders (e.g.  
XX cancer) based on patient response at a molecular level. The present  
XX sequence is used in the exemplification of the present invention.

OS

CC binds to a polypeptide, which is prepared by immunizing a host animal  
 CC with a composition comprising the polypeptide or its antigen binding  
 CC fragment and collecting cells from the host expressing antibodies against  
 CC the antigen or its antigen binding fragment, a composition comprising the  
 CC antibody and a carrier, a method of screening for anticancer activity, a  
 CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a  
 CC method of treating cancer and a method of inhibiting expression of a CA  
 CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA  
 CC nucleic acids. The antibody is useful for detecting the presence or  
 CC absence of cancer cells in an individual which involves contacting cells  
 CC from the individual with the antibody and detecting a complex of a CA  
 CC protein from the cancer cells and the antibody, where the detection of  
 CC the complex correlates with the presence of cancer cells in the  
 CC individual. The composition is useful for inhibiting growth of cancer  
 CC cells in an individual or for delivering a therapeutic agent to cancer  
 CC cells in an individual. The invention is also useful for diagnosing  
 CC cancer, for treating cancer and for inhibiting expression of a CA gene in  
 CC a cell. This sequence represents murine cancer-associated genomic DNA of  
 CC the invention.

XX Detecting granulocyte activation by detecting differential expression of  
 PT genes associated with granulocyte activation, which serves as diagnostic  
 PT markers that is useful for monitoring disease states and drug toxicity.

XX Claim 1; SEQ ID NO 135; 114pp; English.

XX The invention relates to detecting (M1) granulocyte (GC) activation

CC (GCA), by detecting the level of expression of gene(s) (Gs) identified by  
 CC DNA chip analysis as given in the specification, and comparing the  
 CC expression level to an expression level in an unactivated GC, where  
 CC differential expression of Gs is indicative of GCA. Also included are  
 CC modulating (M2) GA by contacting GC with an agent that alters the  
 CC expression of at least one gene in Gs; (2) screening (M3) for an agent  
 CC capable of modulating GCA or an inflammation (especially chronic) in a  
 CC tissue, an allergic response in a subject, exposure of a subject to a  
 CC pathogen or sterile inflammatory disease using the gene expression  
 CC profile; (3) detecting (M4) an inflammation (especially chronic) in a  
 CC tissue, an allergic response in a subject, exposure of a subject to a  
 CC pathogen or sterile inflammatory disease, by detecting the level of  
 CC expression in a sample of the tissue of gene(s) from Gs, where the level  
 CC of expression of the gene is indicative of inflammation; (4) treating  
 CC (M5) an inflammation (especially chronic) or in a tissue, an allergic  
 CC response in a subject, exposure of a subject to a pathogen or sterile  
 CC inflammatory disease, by contacting a tissue having inflammation with an  
 CC agent that modulates the expression of gene(s) from Gs in the tissue. M1  
 CC is useful for detecting GCA; M2 is useful for modulating Gs; M3 is useful  
 CC for screening an agent capable of modulating GCA preferably in an  
 CC inflammation in a tissue; M4 is useful for detecting an inflammation  
 CC (especially chronic) in a tissue, an allergic response in a subject,  
 CC exposure of a subject to a pathogen or sterile inflammatory disease (e.g.  
 CC psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis,  
 CC cardiac reperfusion injury, renal reperfusion injury, ARDS, adult  
 CC respiratory distress syndrome, inflammatory bowel disease, Crohn's  
 CC disease, ulcerative colitis, periodontal disease; also bacterial  
 CC infection, viral infection, parasitic infection, protozoal infection,  
 CC fungal infection and M5 is useful for treating one of the above  
 CC conditions. The present sequence represents a gene differentially  
 CC expressed in granulocytes. Note: The sequence data for this patent did  
 CC not form part of the printed specification, but was obtained in  
 CC electronic format directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pct\_sequences

XX  
PT Early detection of soft tissue sarcoma comprises determining expression  
PT of a gene in a first soft tissue sample and a normal soft tissue sample  
PT and comparing the gene expression, also useful in treating soft tissue  
PT sarcoma.  
XX  
PS Example 2; SEQ ID NO 165; 210pp; English.  
XX  
CC The invention relates to a novel method for detecting soft tissue sarcoma  
CC which comprises obtaining a first soft tissue sample from an individual  
CC and a normal soft tissue sample from the same or different individual,  
CC determining the expression of a gene in both samples and comparing the  
CC expression of the gene in both soft tissue samples, where a higher level  
CC of protein expression in the first soft tissue sample indicates the  
CC presence of soft tissue sarcoma. The method of the invention has  
CC cytostatic applications and may be useful for detecting soft tissue  
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic  
CC acid sequences may be useful in diagnostic and screening applications.  
CC The current sequence is that of a human soft tissue sarcoma-upregulated  
CC DNA of the invention. The current sequence is not shown within the  
CC specification per se but was submitted in CD format by the inventor.

PT Monitoring drug activities in vivo comprises comparing an expression  
PT profile of a gene in a peripheral blood sample of a patient before and

PT after drug therapy.  
XX  
PS Disclosure; SEQ ID NO 52; 136pp; English.  
XX  
CC The invention relates to a method of monitoring drug activities in vivo  
CC by comparing an expression profile of at least one gene in a peripheral  
CC blood sample of a patient to a reference expression profile of the at  
CC least one gene, where the at least one gene is differentially expressed  
CC in peripheral blood mononuclear cells (PBMCs) of patients who have a non-  
CC blood disease and are subjected to a drug therapy as compared to PBMCs  
CC isolated from the patient before the drug therapy, and where the patient  
CC has the non-blood disease and is being treated by the drug therapy. The  
CC method, kit, and nucleic acid array are useful for monitoring drug  
CC activities in vivo. The drug is especially CCI-779, an ester analogue of  
CC the immunosuppressant rapamycin which is a potent inhibitor of the  
CC mammalian target of rapamycin (mTOR). This sequence represents a gene  
CC expressed in PBMC altered by the drug therapy. (Note: this sequence does  
CC no form part of the printed specification but was obtained in electronic  
CC format from WIPO at ftp.wipo.int/pub/published\_pct\_sequences/).

 XX Early detection of soft tissue sarcoma comprises determining expression  
 PT of a gene in a first soft tissue sample and a normal soft tissue sample  
 PT and comparing the gene expression, also useful in treating soft tissue  
 PT sarcoma.  
 XX  
 XX Example 2; SEQ ID NO 6042; 210pp; English.  
 XX  
 CC The invention relates to a novel method for detecting soft tissue sarcoma  
 CC which comprises obtaining a first soft tissue sample from an individual  
 CC and a normal soft tissue sample from the same or different individual,  
 CC determining the expression of a gene in both samples and comparing the  
 CC expression of the gene in both soft tissue samples, where a higher level  
 CC of protein expression in the first soft tissue sample indicates the  
 CC presence of soft tissue sarcoma. The method of the invention has  
 CC cytostatic applications and may be useful for detecting soft tissue  
 CC sarcoma, possibly via gene therapy or vaccine production. The nucleic  
 CC acid sequences may be useful in diagnostic and screening applications.  
 CC The current sequence is that of a human soft tissue sarcoma-upregulated  
 CC DNA of the invention. The current sequence is not shown within the  
 CC specification per se but was submitted in CD format by the inventor.

XX PT expression of disease-related genes.  
XX PS Disclosure; Page; 75pp; German.

XX CC The invention relates to a novel method for in vitro detection of  
XX CC systemic inflammatory response syndrome (SIRS). The method comprises  
XX CC detecting abnormal expression of disease-related genes, or their  
XX CC associated peptides. The method of the invention demonstrates  
XX CC antibacterial, immunosuppressive and antiinflammatory applications and  
XX CC may be used for early differential diagnosis, monitoring progression, and  
XX CC assessing risk, assessing the likely response to treatment and for post  
XX CC mortem diagnosis of systemic inflammatory response syndrome, sepsis and  
XX CC sepsis-like conditions. The recombinant or synthetic nucleic acid  
XX CC sequences of the invention, or derived proteins or peptides, may be  
XX CC useful as calibrants in assays for the specified diseases, for evaluating  
XX CC activity or toxicity in screening for active agents and/or for  
XX CC preparation of agents for treatment or prevention of the specified  
XX CC diseases. The current sequence is that of a human SIRS/sepsis diagnostic  
XX CC marker DNA fragment of the invention. Note: The sequence data for this  
XX CC patent did not form part of the printed specification, but was obtained

CC in electronic format directly from WIPO at ftp.wipo.int/pub/published  
CC pct sequences. Furthermore, a number of arbitrary SEQ ID NO.s are  
CC disclosed within the specification, however, these have not been taken  
CC into account during indexing due to inconsistencies in application and  
CC format

The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
tail. The sequence tag present in the cDNA between the NotI site
and the oligo-dT track served to verify it as a clone from the
normalized hippocampus library cDNA library Preparation: M.B.
Soares Lab Clone distribution: NIH BMAP cDNA clones will be made
available by the means that is soon to be determined. When NIH
determines the means for distributing of the BMAP cDNA clones, this
record will be updated accordingly when that means is determined.
The following repetitive elements were found in this cDNA sequence:
1-73, >AT rich#Low complexity
Seq primer: M13 Forward
POLYA=yes.

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the hippocampus tissue cDNA library Preparation: M.B. Soares Lab Clone distribution: Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS. It should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP cDNAs whose availability will be considered under appropriate and limited collaborative arrangements. The following repetitive elements were found in this cDNA sequence: 1-21,  
>AT rich#Low complexity  
Seq primer: M13 Forward  
POLYA=Yes.

----- Summary Statistics  
Center project name: M\_BA0404L15  
-----

## NOTICE:

This sequence was finished as follows unless otherwise noted:  
all regions were double stranded, sequenced with an alternate  
chemistry, or covered by high quality data (i.e., phred quality >=  
30); an attempt was made to resolve all sequencing problems, such  
as compressions and repeats; all regions were covered by sequence  
from more than one subclone; and the assembly was confirmed by  
restriction digest.

## MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren,  
Department of Genetics, Washington University, St. Louis MO. For  
additional information about the map position of this sequence, see  
<http://genome.wustl.edu>

## SOURCE INFORMATION:

The RPCI-23 BAC Library has been constructed by Kazutoyo Oseguwa  
and Minako Tateno in the laboratory of Pieter de Jong  
(<http://www.chori.org>) from female C57BL/6J mouse kidney and/or  
brain genomic DNA. The clone and detailed information can be  
obtained from Research Genetics, Inc. (<http://www.resgen.com>) or  
Pieter de Jong and coworkers at <http://www.chori.org>

## NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

Email: mczody@broad.mit.edu  
Primer A: No sequence submitted  
Primer B: No sequence submitted  
STS size: 711  
Protocol:  
23,021,928 chimpanzee whole genome shotgun reads were aligned to  
the Human genome NCBI  
Build 34 (hg16, July 2003). Chimp WGS reads were from 9 donors,  
including Clint (Pan  
troglodytes versus), 3 other Pan troglodytes versus chimps  
(Donald, Karlén, Yvonne), 3 Pan  
troglodytes troglodytes chimps (Noémie, Masuku, Clara) and 2 chimps  
of unknown origin  
(Gon, Unknown Chimp). Common names: Pan troglodytes versus is the  
western chimp and Pan  
troglodytes troglodytes is the central chimp. To be included in  
chimpanzee SNP discovery, a  
read must be at least 500bp in length, at least 50% of its base  
calls must have Phred  
score >= 20, at least 30% of its base calls must satisfy  
SNQS(30,25) (single strand NQS, the  
base in question has Phred score >= 30, the surrounding 10 bases in  
the read have Phred  
score >= 25), and the read must have at least 200 bp SNQS(30,25)  
bases. Reads not uniquely  
placed in the genome and read pairs whose two ends were not  
consistently placed were  
discarded. After above filtering, NQS(30,25) standard was applied  
to all pairs of  
overlapping reads to call NQS bases and SNPs. Alignments (between  
two reads) with less  
than 100 NQS bases or with SNP rate > 0.01 were discarded. To  
exclude alignment between two

copies of a single read, comparisons between two reads that share 95% of their genome alignments (>=95% bases of read A and >=95% bases of read B were placed at the same locus of human genome) were discarded.

## JOURNAL

## COMMENT

23, 021,928 chimpanzee whole genome shotgun reads were aligned to the Human genome NCBI  
Build 34 (hg16, July 2003). Chimp WGS reads were from 9 donors, including Clint (Pan troglodytes verus), 3 other Pan troglodytes verus chimps (Donald, Karlien, Yvonne), 3 Pan troglodytes troglodytes chimps (Noemie, Masuku, Clara) and 2 chimps of unknown origin (Gen, Unknown Chimp). Common names: Pan troglodytes verus is the western chimp and Pan troglodytes troglodytes is the central chimp. To be included in chimpanzee SNP discovery, a read must be at least 500bp in length, at least 50% of its base calls must have Phred score >= 20, at least 30% of its base calls must satisfy SNQS(30,25) (single strand NQS, the base in question has Phred score >= 30, the surrounding 10 bases in the read have Phred score >= 25), and the read must have at least 200 bp SNQS(30,25)

bases. Reads not uniquely placed in the genome and read pairs whose two ends were not consistently placed were discarded. After above filtering, NQS(30,25) standard was applied to all pairs of overlapping reads to call NQS bases and SNPs. Alignments (between two reads) with less than 100 NQS bases or with SNP rate > 0.01 were discarded. To exclude alignment between two copies of a single read, comparisons between two reads that share 95% of their genome alignments (>=95% bases of read A and >=95% bases of read B were placed at the same locus of human genome) were discarded.

JOURNAL Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
COMMENT On Dec 8, 1998 this sequence version replaced gi:3646111.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em, EMBL; Sw, SWISSPROT; Tr, TREMBL; Wp, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome X, constructed by the Sanger Centre Chromosome X Mapping
Group. Further information can be found at
http://www.sanger.ac.uk/HGP/ChrX
RP4-737M10 is from the library RPCI-4 constructed by the group of
Pietter de Jong. For further details see
http://www.chori.org/bacpac/home.htm
VECTOR: pCYPAC2

Contact: vegas@sanger.ac.uk
-----
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.

COMMENT
Medical Center Dr., Rockville, MD 20850, USA
On Aug 21, 1997 this sequence version replaced gi:1930144.
BAC clone CIT987SK-551G9 is located in band 16p13.1 of chromosome
16. Genes were identified by a combination of five methods: XGRAIL
(available by anonymous ftp from arthur.epm.ornl.gov), Genefinder
(available by anonymous ftp from colin@u.washington.edu), GENSCAN
searches of the EST database at TIGR
(http://www.tigr.org/tdb/hcd/hcd.html) and searches against a
peptide database. Repeats were identified using Censor (Jurka, J.,
Klonowski, P., Dagman, V., Pelton, P. Censor-a program for the
identification and elimination of repetitive elements from DNA
sequences. Computers Chem 20: 119-121 (1996); available by
anonymous ftp from ncbi.nlm.nih.gov).

----- Project Information  
Center project name: L32316  
Center clone name: 273\_M\_3

-----  
\* NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence. \* as soon as it is available and the accession number will be preserved.

\* 1 21232: contig of 21232 bp in length  
\* 21233 21332: gap of unknown length  
\* 21333 91315: contig of 69983 bp in length  
\* 91316 91415: gap of unknown length  
\* 91416 145954: contig of 54539 bp in length  
\* 145955 146054: gap of unknown length  
\* 146055 161009: contig of 14955 bp in length.

XX Identifying a compound that can treat disease or disorders, such as, a
XX neuropsychiatric disorder e.g., schizophrenia, or autism, comprises
XX determining the expression of one or more efficacy genes in a cell
XX contacted with the test compound.
XX Claim 9; SEQ ID NO 67; 39pp; English.
XX This invention relates to a novel screening method identified as a multi-
XX parameter high throughput screening (MPRTs) assay. Specifically, it
XX refers to an assay that utilizes the disease signature of a plurality of
XX specific genes associated with a particular disease, and identifies
XX differential expression between those cells taken from individuals
XX affected by that disease and those that are not affected. The present
XX invention then describes the screening of candidate pharmaceutical
XX compounds to identify those that have a potential therapeutic benefit for
XX the treatment of neuropsychiatric and neurodegenerative disorders
XX including schizophrenia, bipolar affective disorder (BAD) and autism, as
XX well as Parkinson's and Alzheimer's disease. Accordingly, the compounds
XX of this invention exhibit various activities including neuroleptic,
XX nootropic, antimanic and antidepressant. Furthermore, the screening
XX method used in MPRTs will be automated, such that a large number of test
XX compounds may be rapidly screened with a minimal amount of labour and
XX effort. This polynucleotide is the cDNA sequence of a gene that is
XX differentially expressed in mice in the presence of the therapeutic
XX compound valproate, given in an exemplification of the invention.

XX
XX New isolated nucleic acid molecule, useful for drug screening and
PT toxicity assays or for assessing the impact, including toxicity, of a
PT compound, pharmaceutical agent or environmental pollutant on a cell or
PT living organism.
XX
XX Claim 1; SEQ ID NO 6783; 4lpp; English.
XX
XX This invention is related to a novel isolated canine nucleic acid
CC sequences and the construction of canine microarrays containing a
CC significant portion of the canine genome. The isolated canine nucleic
CC acid sequences of the invention may be useful for drug screening and
CC toxicity assays. The invention is therefore useful for assessing the
CC impact, including toxicity, of a compound, pharmaceutical agent or
CC environmental pollutant on a cell or living organism. The methods are
CC useful for detecting genes that are up- or down-regulated in canines in a
CC disease state. The sequences are useful as diagnostic agents or markers
CC to detect a cellular response in a sample individually or as part of a
CC gene expression profile. It is also useful as a target for agents that
CC modulate gene expression or activity. The database is useful for
CC producing electronic Northern blots that allow the user to determine the cell
CC type or tissue in which a given gene is expressed and to allow
CC determination of the abundance or expression level of a given gene in a
CC particular tissue or cell. The methods are useful for determining the
CC similarity of a toxic response to one or more individual compounds. The
CC methods are useful for predicting at least one toxic response or the
CC likelihood that a compound or test agent will induce various specific
CC pathologies such as those of the liver (liver necrosis, fatty liver
CC disease, protein adduct formation or hepatitis), those of the kidney,
CC heart, brain or testes, or other pathologies associated with at least one
CC of the toxins. The methods are also useful for predicting or elucidating
CC the potential cellular pathways influenced, induced or modulated by the
CC compound or test agent due to the similarity of the expression profile
CC compared to the profile induced by a known toxin. The present sequence is
CC that of a canine DNA sequence which was claimed for use during the
CC production of a canine microarray of the invention.

XX
XX Diagnosing breast cancer comprises comparing the level of expression of
PT genes or gene products in a first biological sample taken from a patient
PT with that in a normal patient sample.
XX
XX Claim 2; SEQ ID NO 104; 53pp; English.
XX
XX The present invention relates to a method (M1) for diagnosing breast
CC cancer in a patient. The method comprises comparing the level of
CC expression of one or more genes or gene products in a biological sample
CC from the patient with that in a normal patient sample, where a difference
CC in the gene expression in the first sample compared to that in the second
CC sample is a diagnostic of the disease. Also claimed are: method (M2) for
CC distinguishing between normal and disease tissues; method (M3) for
CC monitoring the response of a breast cancer patient to treatment with an
CC anti-cancer agent; method (M4) for identifying a compound for treating
CC breast cancer; and an array for distinguishing between normal and disease
CC tissues comprising two or more probes corresponding to genes selected
CC from ADR98995-ADR99121 or comprising two or more polypeptides selected
CC from ADR99122-ADR99248. In M1 and M2 the genes are selected from ADR98995
CC -ADR99121 and the gene products are polypeptides selected from ADR99122-
CC ADR99248. M1 is useful for diagnosing breast cancer. M2 and the array are
CC useful for distinguishing between normal and disease tissue. M3 is useful
CC for monitoring the response of a breast cancer patient to treatment with
CC an anti-cancer agent. M4 is useful for identifying a compound for
CC treating breast cancer. Note: The sequence data for this patent did not
CC form part of the printed specification, but was obtained in electronic
CC format directly from WIPO at ftp.wipo.int/pub/published_pat_sequences.

PS  
XX  
XX The invention relates to an isolated polypeptide encoded by a breast  
CC cancer marker gene comprising any of 141/21-805 nucleotide sequences,  
CC given in the specification. The methods of the invention are useful for  
CC diagnosing patients having an identified breast mass or symptoms  
CC associated with breast cancer, to diagnose breast cancer or its  
CC precursors, and for monitoring the efficacy of treatment of a breast  
CC cancer patient (e.g. efficacy of chemotherapy). The methods are also  
CC useful for evaluating a patient before, after or during therapy, to  
CC evaluate the reduction in a tumour burden. The breast cancer marker gene  
CC proteins are useful as immunogens for raising antibodies, by immunising a  
CC mammal with a breast cancer marker protein. The marker proteins are  
CC useful as bait proteins in a two-hybrid or three-hybrid assay, to  
CC identify other proteins which bind to or interact with the marker  
CC proteins. The breast cancer marker genes are useful as surrogate marker  
CC genes for one or more disorders, disease states or conditions leading to  
CC disease states, in particular, breast cancers. The breast cancer marker  
CC genes are useful as pharmacodynamic marker genes. An antibody which  
CC selectively binds to a protein of a breast cancer marker gene is useful  
CC for treating cancers, particularly breast cancers. The host cell of the  
CC invention is useful for producing non-human transgenic animals. This  
CC polynucleotide sequence represents one of the breast cancer marker genes  
CC of the invention

XX  
XX A method, useful for prognosing and treating solid tumor, comprises  
PT comparing an expression profile of a gene expressed in peripheral blood  
PT mononuclear cells to a reference expression profile of a gene.  
PT  
XX  
XX Disclosure; Page; 111pp; English.  
PS  
XX  
XX The invention describes a method comprising comparing an expression  
CC profile of at least one gene in a peripheral blood sample of a patient to  
CC at least one reference expression profile of the at least one gene, where  
CC the patient has a solid tumour, and each of the gene is differentially  
CC expressed in peripheral blood mononuclear cells (PBMCs) of a first class  
CC of patients as compared to PBMCs of a second class of patients, where  
CC both the first and second classes of patients have the solid tumour, and  
CC each of the first and second classes is a subcluster formed by an  
CC unsupervised clustering analysis of gene expression profiles in PBMCs of  
CC a population of patients who have the solid tumour, and where the  
CC majority of the first class of patients has a first clinical outcome, and  
CC the majority of the second class of patients has a second clinical  
CC outcome. Also described are: a system comprising (i) a memory or a  
CC storage medium including data that represent an expression profile of at  
CC least one gene in a peripheral blood sample of a patient who has a solid  
CC tumour, (ii) at least another storage medium including data that  
CC represent at least one reference expression profile of the gene, (iii) a  
CC program capable of comparing the expression profile to the reference  
CC expression profile, and (iv) a processor capable of executing the  
CC program, where expression levels of the gene in peripheral blood  
CC mononuclear cells of patients who have the solid tumour correlate with  
CC clinical outcomes of the patients; and a nucleic acid or protein array  
CC comprising concentrated probes for solid tumour prognosis genes, where  
CC each of the solid tumour prognosis genes is differentially expressed in  
CC PBMCs of a first class of patients as compared to PBMCs of a second class  
CC of patients, where both the first and second classes of patients have a  
CC solid tumour, and where the first class of patients has a first clinical  
CC outcome, and the second class of patients has a second clinical outcome.  
CC The method, system, and array are useful for prognosing and treating  
CC solid tumours. This sequence represents a solid tumour prognosis gene of  
CC the invention. Note: The sequence data for this patent did not form part  
CC of the printed specification, but was obtained in electronic format  
CC directly from WIPO at ftp.wipo.int/pub/published\_ftc\_sequences.

XX Human genome-derived single exon nucleic acid probes useful for analyzing  
XX gene expression in human adult liver.  
XX  
XX Claim 1; SEQ ID NO 12702; 658pp; English.  
XX  
XX The invention relates to a single exon nucleic acid probe (SENP) (I) for  
XX measuring human gene expression in a sample derived from human adult  
XX liver, comprising one of 13109 defined nucleotide sequences given in the  
XX specification (or complements/ fragments). The probe hybridizes at high  
XX stringency to a nucleic acid molecule expressed in the human adult liver.  
XX (I) may be used for predicting, measuring and displaying gene expression  
XX in samples derived from human adult liver. The genes identified may be  
XX involved in genetic liver diseases such as cirrhosis,  
XX hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is  
XX associated with coronary heart disease. ABS25011-ABS51005 represent human  
XX liver single exon nucleic acid probes of the invention. Note: The  
XX sequence information for this patent does not appear in the printed  
XX specification but was obtained in electronic format directly from WIPO at  
XX ftp.wipo.int/pub/published\_pct\_sequences

XX Spatially-addressable set of single exon nucleic acid probes, used to measure gene expression in human lung samples.

XX Claim 1; SEQ ID NO 12097; 634pp; English.

XX The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes; the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung mRNA, and (b) measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several tissues and/or cell types using hybridisation to a single exon microarrays having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases such as asthma, lung cancer, chronic obstructive pulmonary disease (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary histiocytosis, lymphangioloeyomatosis, pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesia, pulmonary hypertension and hyaline membrane disease. The present sequence is a single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

XX New polynucleotides and polypeptides are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy.

XX Claim 1; SEQ ID NO 731; 305pp; English.

XX The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynucleotide or as a probe for detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides are useful as pharmaceutical agents. The present sequence represents a cDNA sequence of the invention.

XX The invention relate to a method of diagnosing (M1) non-blood disease
```

PT renal disease, or demyelinating diseases of the central or peripheral  
PT nervous system.

XX Claim 1; SEQ ID NO 1942; 2940pp; English.

XX The invention relates to a novel isolated nucleic acid and the PRO  
CC polypeptide encoded by it. A protein of the invention has  
CC antiinflammatory, antiarthritic, antirheumatic, immunosuppressive,  
CC osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic,  
CC antiasthmatic, hepatotropic, and respiratory activity. A polynucleotide  
CC of the invention may have a use in gene therapy. The PRO polypeptide, its  
CC agonist, antagonist, or antibody that specifically binds to the  
CC polypeptide is useful for treating an immune related disorder such as  
CC systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,  
CC juvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an  
CC idiopathic inflammatory myopathy, Sjogren's syndrome, systemic  
CC vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune  
CC thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal  
CC disease, a demyelinating disease of the central or peripheral nervous  
CC system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome,  
CC a chronic inflammatory demyelinating polyneuropathy, a hepatobiliary  
CC disease, infectious or autoimmune chronic active hepatitis, primary  
CC biliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis,  
CC inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's  
CC disease, an autoimmune or immune-mediated skin disease, a bullous skin  
CC disease, erythema multiforme, contact dermatitis, psoriasis, an allergic  
CC disease, asthma, allergic rhinitis, atopic dermatitis, food  
CC hypersensitivity, urticaria, an immunologic disease of the lung,  
CC eosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity  
CC pneumonitis, a transplantation associated disease, graft rejection or  
CC graft-versus-host disease. The present sequence encodes a PRO protein of  
CC the invention.

PT New nucleic acid, and derived proteins, useful for diagnosis of bronchial  
PT cancer and in screening for therapeutic and diagnostic agents.

XX Claim 1; SEQ ID NO 376; 1381pp; German.

XX This invention relates to a novel isolated nucleic acid associated with  
CC bronchial cancer comprising 489 defined sequences given in the  
CC specification. The invention may be useful for the production of  
CC compounds with a cytostatic activity through the inhibition of expression  
CC or activity of tumour-associated proteins. The novel DNA sequences and  
CC the proteins/peptides encoded by them are used for detecting bronchial  
CC cancer or determining the risk of developing it and to screen for  
CC specific binding partners of the DNA or protein sequences, where the  
CC binding partners are potentially useful as agents for treating or  
CC diagnosing bronchial cancer. The DNA or protein sequences can also be  
CC used for prognosis, detection of metastases and for secondary treatment  
CC (of tumours that have been stabilised or are no longer detectable).  
CC Detecting abnormal expression of the DNA sequences provides early  
CC diagnosis of bronchial cancers. The present sequence is that of a novel  
CC bronchial cancer-associated human gene sequence of the invention.

XX Novel isolated nucleic acid molecules (markers) overexpressed in ovarian cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer.

XX Disclosure; SEQ ID NO 20129; 106pp; English.

XX The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of a marker in a patient sample and a normal level of expression of the marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed polynucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein fragment corresponding to the marker. The presence of protein or protein fragment is detected using an antibody that specifically binds with the protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide comprising the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method is carried out using an ovarian tissue sample. A composition comprising a marker, cancer polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences.

XX
PA (HUMA-) HUMAN GENOME SCI INC.
PA Rosen CA, Barash SC, Ruben SM;
PI WPI; 2001-483426/52.
XX
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
XX Disclosure; SEQ ID NO 39541; 3071pp + Sequence Listing; English.
XX
XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patient's own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
CC represent sequences used in the exemplification of the present invention

 PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,  
 PT useful for preventing, diagnosing and/or treating cancers and metastasis.  
 XX  
 PS Disclosure; SEQ ID NO 39542; 3071pp + Sequence Listing; English.  
 XX  
 XX AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I)  
 CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic  
 CC activity, and can be used in gene therapy and vaccine production. (I)  
 CC proteins and polynucleotides may be used in the prevention, diagnosis and  
 CC treatment of diseases associated with inappropriate (I) expression. For  
 CC example, they may be used to treat disorders associated with decreased  
 CC expression by rectifying mutations or deletions in a patient's genome  
 CC that affect the activity of (I) by expressing inactive proteins or to  
 CC supplement the patients own production of (I). Additionally, (I)  
 CC polynucleotides may be used to produce the secreted (I), by inserting the  
 CC nucleic acids into a host cell and culturing the cell to express the  
 CC protein. (I) proteins and polynucleotides may be used to prevent,  
 CC diagnose and treat immune/hematopoietic-related diseases, especially  
 CC cancers and cancer metastases of hematopoietic-derived cells. AAK64703  
 CC to AAK87694 represent human immune/hematopoietic antigen genomic  
 CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169  
 CC represent sequences used in the exemplification of the present invention

CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAK82170 to AAK51921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patient's own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
CC represent sequences used in the exemplification of the present invention

DR Array containing probes for genes involved in mitochondrial biology,
PT useful for determining mitochondrial biology gene expression profiles for
PT use in diagnosing pathologies and identifying biochemical pathways.
XX
PS Claim 2; SEQ ID NO 883; 201pp; English.
XX
CC The invention relates to a novel array comprising at least two isolated
CC nucleotide molecules, each molecule having a sequence capable of uniquely
CC hybridising to a nucleic acid molecule which is an expression product of
CC a gene involved in mitochondrial biology. The array comprises two or more
CC isolated nucleic acid molecules or spots, each molecule having a sequence
CC chosen from sequence of 994 human probes and 2046 mouse probes. An array
CC of the invention is useful for determining an expression profile of a
CC mouse or human sample containing nucleic acid, by contacting the array
CC with the sample under conditions allowing selective hybridisation, and
CC measuring hybridisation of nucleic acid in the sample to the array to
CC produce an expression profile. The array is also useful for determining
CC an expression profile of a first labelled sample containing nucleic acid
CC relative to a second, differently labelled sample containing nucleic
CC acid. The second sample is a reference or a standard. An array is useful
CC for determining an expression profile diagnostic of an energy-metabolism-
CC related physiological condition. An array of the invention is useful for
CC determining mitochondrial biology gene expression profiles of organisms,
CC such as human, mice and closely related species, tissue and organs of
CC such organisms, which are useful for determining expression profiles
CC diagnostic of energy metabolism-related physiological conditions,
CC diagnosing such physiological conditions, identifying biochemical
CC pathways, genes, and mutations involved in such physiological conditions,
CC identifying therapeutic agents useful for preventing and/or treating such
CC physiological conditions, evaluating and/or monitoring the efficacy of
CC such therapies, and creating and identifying animal models of human
CC energy metabolism-related physiological conditions. An array is also
CC useful for defining expression signatures or profiles for mitochondrial
CC diseases, as well as distinguishing clinical disorders that result from
CC oxidative phosphorylation (OXPHOS) dysfunction, oxidative stress,
CC apoptosis and aging. An array of the invention contains probes of genes
CC not previously recognised to participate in mitochondrial biology. The
CC sequences shown in ADD32231-ADD33223 represent human mitochondrial DNA
CC clones used to make the probes of the invention. Some sequences are not
CC present, these are SEQ ID NO's 295, 1174, 1213, 1700, 1728, 1730, 1905,
CC 1906, 2408 and 2643.

XX Claim 1; SEQ ID NO 2565; 134pp; English.

CC This invention relates to a novel method for altering one or more plant  
CC characteristics. Specifically, it refers to identifying genes that are up  
CC - or down-regulated in transgenic plants overexpressing the heterodimeric  
CC E2Fa/DPA transcription factor of Arabidopsis and using these sequences to  
CC alter plant characteristics accordingly. The present invention describes  
CC generating transgenic plants for the production of growth regulators,  
CC enzymes, therapeutics, pharmaceuticals and animal feed products, where  
CC the altered plant characteristics are selected from increased yield or  
CC biomass, enhanced survival capacity, stress tolerance, plant architecture  
CC or physiology, altered endoreduplication, biochemistry, signal  
CC transduction, storage lipid mobilization and/or altered photosynthesis,  
CC each relative to the corresponding wild type plants. Accordingly, these  
CC sequences can also be useful as positive or negative selectable markers  
CC during transformation of cells or tissues. The identified genes play a  
CC role in a variety of biological processes such as DNA replication, cell  
CC wall biosynthesis, nitrogen and/or carbon metabolism or they function as  
CC transcription factors. This polynucleotide sequence is thale cress cDNA  
CC repressed 1.3 fold or more in plants overexpressing the E2Fa/DPA  
CC transcription factor, given in an exemplification of the invention.

PS ...Disclosure; SEQ ID NO 14349; 1037pp; English.

XX The present invention describes substantially purified human proteins  
CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1  
CC in the specification). ABN15762 to ABN27252 encode the human ORFX  
CC proteins given in ABP00010 to ABP11500. ORFX proteins are useful for  
CC treating or preventing a pathology associated with an ORFX-associated  
CC disorder in humans, and in the manufacture of a medicament for treating a  
CC syndrome associated with ORFX-associated disorder. ORFX polynucleotide  
CC sequences can be used in gene therapy. ORFX sequences can be used in the  
CC treatment of cancer, hyperproliferative disorders, cirrhosis of liver,  
CC psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage,  
CC osteoarthritis, neurodegenerative disorders, disorders related to organ  
CC transplantation, cardiovascular diseases, diabetes mellitus, systemic  
CC lupus erythematosus, hypertension, hypothyroidism, cholesterol ester  
CC storage disease, various immune deficiencies and disorders, infectious  
CC diseases, autoimmune disorders such as multiple sclerosis, rheumatoid  
CC arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host  
CC disease and autoimmune inflammatory eye disease. ORFX proteins are also  
CC useful for treating burns, incisions, ulcers, for treating osteoporosis,  
CC bone degenerative disorders, or periodontal disease, and for gut  
CC protection or regeneration and treatment of lung or liver fibrosis,  
CC reperfusion injury in various tissues and conditions resulting from  
CC systemic cytokine damage. N.B. The sequence data for this patent did not  
CC form part of the printed specification, but was obtained in electronic  
CC format directly from WIFO at ftp.wipo.int/pub/published\_pct\_sequences

XX PT Novel human cancer associated protein encoded within open reading frame
XX PT of cancer associated gene, useful as targets for diagnosing cancer.
XX PS Claim 16; SEQ ID NO 656; 182pp; English.
XX CC The invention relates to cancer-associated proteins (CAP) and the cancer-
XX CC associated (CA) nucleic acids encoding them. The invention also relates
XX CC to a method for treating cancers involving administering to a patient an
XX CC inhibitor of CAP, and a method of screening for anticancer activity in a
XX CC potential drug involving providing a cell that expresses a CA gene
XX CC contacting a tissue sample derived from a cancer cell with an anticancer
XX CC drug candidate and monitoring the effect of the anticancer drug candidate
XX CC on expression of the CA gene. The CAP proteins are useful for detecting
XX CC cancer associated with expression of a CAP protein in a test cell sample
XX CC and for screening for a bioactive agent capable of modulating the
XX CC activity of a CAP protein. The CA nucleic acids are useful for diagnosing
XX CC cancer, involving determining the expression of a CA nucleic acid in a
XX CC tissue. This sequence represents a human CA gene of the invention. Note:
XX CC The sequence data for this patent did not form part of the printed
XX CC specification, but was obtained in electronic format directly from WIPO

XX Determining susceptibility of an individual to joint space narrowing.  
XX osteophyte development and/or joint pain comprises identifying whether  
XX the individual has at least one polymorphism in a polynucleotide encoding  
XX a protein.  
XX Disclosure; SEQ ID NO 208; 297pp; English.  
XX The invention relates to a method of determining susceptibility of an  
XX individual to joint space narrowing and/or osteophyte development and/or  
XX joint pain comprising identifying whether the individual has at least one  
XX polymorphism in a polynucleotide encoding at least one of the protein  
XX listed in the specification. The methods, composition and agent are  
XX useful for modulating the susceptibility of an individual to joint space  
XX narrowing and/or osteophyte development and/or joint pain that is  
XX associated with a disease, preferably osteoarthritis. The cell line and  
XX the non-human animal are useful for screening for an agent for diagnosing  
XX an individual having susceptibility to joint space narrowing and/or  
XX osteophyte development and/or joint pain. This sequence corresponds to  
XX the polynucleotide encoding a protein listed in the specification. (Note:  
XX The sequence data for this patent did not form part of the printed  
XX specification but was obtained in electronic format directly from WIPO at  
XX ftp.wipo.int/pub/published\_pct\_sequences).

XX Amplifying gene-specific(GS) polynucleotide by producing population of
PT DNA molecules having adapter molecule and anchor primer that has
PT captureable group, synthesizing and amplifying single-stranded GS
PT polynucleotide.
XX Claim 68; Page 102; 115pp; English.
XX The present invention relates to a method of isolating, amplifying and
XX sequencing gene specific sequences. This involves (a) synthesising double
XX stranded (ds) DNAs containing the gene specific polynucleotide which has
XX an anchor primer with a captureable group at the 3' end; (b) ligating a
XX ds adapter molecule to each dsDNA; (c) synthesising a single-stranded
XX (ss) gene specific polynucleotide using a gene specific oligonucleotide
XX primer having a second captureable group; and (d) amplifying the single
XX stranded gene specific polynucleotide after isolation. The method is used
XX for determining without cloning an extended sequence of a gene specific
XX polynucleotide that has a partial gene sequence known by carrying out the
XX method and then sequencing the amplified isolated gene specific
XX polynucleotide without cloning. The method has several diagnostic and
XX research applications, including genetic and infectious disease
XX diagnosis, forensic and paternity testing, toxicology testing, individual
XX identification, genetic research, occupational hazard screening and
XX pharmaceutical development. The method can be used to detect mutations in
XX target genes which may lead to disease conditions such as Alzheimer's
XX disease, cancer and Duchenne muscular dystrophy, thus facilitating the
XX diagnosis of genetic diseases as well as the identification of carriers
XX of recessive genetic disorders. The present sequence is an
XX oligonucleotide useful in the method of the invention

XX Determining if a compound induces a toxic effect on a tissue or cell, for
PT identifying hepatotoxic compounds, comprises comparing a gene expression
PT profile of a tissue or cell sample to a database of Tox mean and non-Tox
PT mean values.
XX Claim 44; SEQ ID NO 980; 874pp; English.
XX The present invention describes a method for determining whether a
CC compound induces a toxic effect on a tissue or cell. The method comprises
CC preparing a gene expression profile of a tissue or cell sample exposed to
CC the compound, and comparing the gene expression profile to a database
CC comprising data or information on the Tox mean and non-Tox mean value.
CC The method is useful for predicting or identifying at least one toxic
CC effect, particularly hepatotoxicity, of a test or unknown compound. The
CC genes listed in the specification are useful as diagnostic or toxicity
CC markers for the prediction or identification of the physiological state
CC of tissue or cell sample that has been exposed to a compound, or to
CC identify or predict the toxic effects of a compound or an agent. These
CC may also be used as markers for monitoring toxicity progression or for
CC drug screening. The present sequence represents a primary rat hepatocyte
CC toxicity modelling related gene sequence from the present invention.

 XX New recombinant DNA construct comprising a promoter positioned to provide  
 PT for expression of a polynucleotide encoding a polypeptide from a  
 PT microbial source, useful for producing plants with improved properties.  
 XX Claim 1; SEQ ID NO 32578; 122pp; English.  
 XX The invention relates to a recombinant DNA construct comprising a  
 CC promoter functional in a plant cell, where the promoter is positioned to  
 CC provide for expression of a polynucleotide encoding a polypeptide from a  
 CC microbial source. The invention also relates to a transformed plant  
 CC comprising the recombinant DNA construct and a method of producing a  
 CC transformed plant having an improved property. The plant is a crop plant  
 CC such as maize or soybean. The method of producing a transformed plant  
 CC having an improved property comprises transforming a plant with the  
 CC recombinant DNA construct and growing the transformed plant, where the  
 CC polynucleotide or polypeptide is useful for improving plant properties.  
 CC The recombinant DNA construct is useful for producing plants with  
 CC improved plant properties, e.g. improved cold, heat or drought tolerance,  
 CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,  
 CC increased resistance to plant disease, better growth rate by modification  
 CC of the cell cycle pathway with plant growth regulators, increased rate of  
 CC homologous recombination, modified seed oil or protein yield and/or  
 CC content, improved yield by modification of carbohydrate, nitrogen or  
 CC phosphorus use and/or uptake, by modification of photosynthesis or by  
 CC providing improved plant growth and development under at least one stress  
 CC condition, improved lignin production or improved galactomannan  
 CC production. This sequence represents a bacterial polynucleotide used in  
 CC the scope of the invention. Note: The sequence data for this patent did  
 CC not form part of the printed specification but was obtained in electronic  
 CC format from USPTO at seqdata.uspto.gov/sequence.html.

 XX New recombinant DNA construct, useful for improving plant tolerance to  
 PT cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or  
 PT pests, for conferring increased resistance to plant disease, or for  
 PT improving yield.  
 XX Claim 1; SEQ ID NO 4266; 15pp; English.  
 XX The invention describes a recombinant DNA construct comprising a  
 CC polynucleotide consisting of a sequence encoding an amino acid sequence  
 CC available in electronic form from the US patent office at  
 CC ftp.seqdata.uspto.gov/sequence.html?docID:2004034888. The polynucleotide  
 CC of the invention are also useful in physical arrays of molecules and as  
 CC plant breeding markers. The recombinant DNA construct is useful for  
 CC improving plant tolerance to cold, heat, drought, herbicides, extreme  
 CC osmotic conditions, pathogens or pests, for manipulating growth rate in  
 CC plant cells by modification of the cell cycle pathway, for conferring  
 CC increased resistance to plant disease, for producing galactomannan,  
 CC lignin or plant growth regulators, for increasing the rate of homologous  
 CC recombination in plants, for improving yield by modification of  
 CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake  
 CC or by providing improved plant growth and development under at least one  
 CC stress condition or for modifying seed oil or protein yield and/or  
 CC content. This sequence represents a plant full length insert  
 CC polynucleotide that can be used in the recombinant DNA construct of the  
 CC invention.

PT New bombesin like peptide with high binding affinity for bombesin  
PT receptors for the modulation of receptors, for example, in the  
PT gastrointestinal tract.  
XX  
PS Claim 15; Fig 1; 16pp; English.  
XX  
CC The invention relates to genes which encode receptors capable of binding  
CC to bombesin-like peptides, expressed in vertebrate tissue. Bombesin-like  
CC peptides are produced and secreted by human small cell lung cancer cells.  
CC Examples of these peptides are gastrin releasing peptide (GRP),  
CC neuromedin B (NMB), neuromedin C (NMC), bombesin receptor subtype-3 (BRS-  
CC 3), BB4 and BB5. The peptides of the invention are useful for modulating  
CC receptors to which they have an affinity including receptors in the  
CC gastrointestinal tract, the central nervous system, testes and uterus.  
CC The sequences are therefore used in the treatment of cancers such as  
CC small cell lung cancer. This sequence represents a cDNA encoding the frog  
CC BB4 receptor

XX New composition comprising two or more isolated polypeptides, useful for

PT preparing a medicament for treating pain in an animal.  
XX  
PS Claim 1; Page; 1017pp; English.  
XX  
CC The invention discloses a composition comprising two or more isolated rat  
CC or human polynucleotides or a polynucleotide which represents a fragment,  
CC derivative or allelic variation of the nucleic acid sequence. Also  
CC claimed are a vector comprising the novel polynucleotide, a host cell  
CC comprising the vector, a method for identifying a nucleotide sequence  
CC which is differentially regulated in an animal subjected to pain and a  
CC kit to perform the method, an array, a method for identifying an agent  
CC that increases or decreases the expression of the polynucleotide sequence  
CC that is differentially expressed in neuronal tissue of a first animal  
CC subjected to pain, a method for identifying a compound which regulates  
CC the expression of a polynucleotide sequence which is differentially  
CC expressed in an animal subjected to pain, a method for identifying a  
CC compound that regulates the activity of one or more of the  
CC polynucleotides, a method for producing a pharmaceutical composition, a  
CC method for identifying a compound or small molecule that regulates the  
CC activity in an animal of one or more of the polypeptides given in the  
CC specification, a method for identifying a compound useful in treating  
CC pain and a pharmaceutical composition comprising the one or more  
CC polypeptides or their antibodies. The polynucleotide or the compound that  
CC modulates its activity is useful for preparing a medicament for treating  
CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction  
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene  
CC therapy). The sequence presented is a human DNA (shown in Table 2 of the  
CC specification) which encodes one of the polypeptides of the invention  
CC which is differentially expressed during pain. Note: The sequence data  
CC for this patent did not form part of the printed specification, but was  
CC obtained in electronic form directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences.

TITLE
Direct Submission
Submitted (16-APR-2002) Yoshihide Hayashizaki, The Institute of
Physical and Chemical Research (RIKEN), Laboratory for Genome
Exploration Research Group, RIKEN Genomic Sciences Center (GSC),
RIKEN Yokohama Institute, 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama,
Kanagawa 230-0045, Japan (E-mail: genome-res@gsr.riken.jp,
URL:http://genome.gsc.riken.jp/, Tel:81-45-503-9222,
Fax:81-45-503-9216)
COMMENT
cDNA library was prepared and sequenced in Mouse Genome
Encyclopedia project of Genome Exploration Research Group in Riken
Genomic Sciences Center and Genome Science Laboratory in RIKEN.
Division of Experimental Animal Research in Riken contributed to
prepare mouse tissues.
Please visit our web site for further details.

Double-stranded cDNA was prepared from cell line RNA.
5'
and 3' adaptors were used in cloning as follows: 5'
adaptor sequence: 5'-CACGGCATATGACC-3' and 3' adaptor
sequence: 5'-ATTCTAGAGCGGAGCGGCGCATG-dt(30)BN-3'
(where B = A, C, G or T and N = A, C, G, or T). Average
insert size 1.55 kb (range 0.9-4.0 kb). 12/15 colonies
contained inserts by PCR. This library was enriched for
full-length clones and was constructed by Clontech
Laboratories (Palo Alto, CA)."

 /note="Vector: lambda ZAP Express/pBK-CMV; Site 1: EcoRI  
 (5' adaptor); Site 2: XhoI (3' linker primer); The mixed  
 organ cDNA library was generated using the ZAP-cDNA method  
 by Stratagene. First strand cDNA synthesis was primed with  
 a 50 bp linker primer containing an oligo dt sequence  
 preceded by a synthetic XhoI site. 5 prime adaptors were  
 used containing an EcoRI cohesive end. The finished cDNAs  
 were inserted in to the ZAP express vector  
 unidirectionally in the sense orientation with respect to  
 the lacZ promoter of pBK-CMV. An amplified library was  
 prepared from approximately 3 million primary clones in  
 the lambda ZAP Express vector. In vivo excision was then  
 used to generate individual pBK-CMV phagemid clones for  
 EST sequencing."

Site 2: NotI; Mouse cDNA project by the Laboratory of  
Genetics, National Institute on Aging (NIA), Intramural  
Research Program, NIH (http://igsun.grc.nia.nih.gov/cDNA).  
This is a long-transcript enriched cDNA library (Ref.  
Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total  
RNAs were obtained from Dr. Mark G. Carter (NIH/NIA-IRP).  
EG cells were cultured at 37 C, 5% CO2 in DMEM  
supplemented with 15% ES cell-qualified FBS, 0.1mM  
non-essential amino acids, 2 mM glutamine,  
penicillin/streptomycin, 1 mM sodium pyruvate, 0.1 mM  
beta-mercaptoethanol, and 1000000 units of LIF per liter.  
Double-stranded cDNAs were synthesized with an Oligo(dT)

primer [Invitrogen:  
5'-pGACTAGTCTAGATCGGAGCGGCCCGCTTTT-3'] from  
2.5 ug of total RNA, treated with T4 DNA polymerase, and  
purified by ethanol-precipitation. The cDNAs were ligated  
to lona-linker Lu-Sal4, purified by Centricon 100. Then, the  
separated from free linkers by Centricon 100. Then, the  
cDNAs were amplified by long-range high fidelity PCR using  
Ex Taq polymerase (Takara) with a primer Sal4-S. The  
products were purified by phenol/chloroform and Centricon  
100. The cDNAs were digested with SalI and NotI enzymes  
and cloned into SalI/NotI site of pCMV-SPORT6 plasmid  
vector. The DH10B E. coli host was transformed with the  
ligation mixture by the standard chemical method. The  
average insert size is about 4.0 kb. The library was  
constructed by Yulan Piao."

/note="Organ: Stomach; Vector: pTZ19RP1; Site:1: EcoRI;  
Site 2: NotI; The poly (A)+ RNA was dephosphorylated with  
bacterial alkaline phosphatase (BAP) and then decapped  
with tobacco acid pyrophosphatase (TAP). The decapped  
intact mRNA was ligated with DNA-RNA linker including EcoR  
I site by treatment of T4 RNA ligase and the first strand  
cDNA was synthesized from oligo dt-selected mRNA by  
priming with dt-tailed vector. The dt-tailed vector was  
adjusted to have about 60nt. The cDNA vector was  
circularized with E. coli DNA ligase after digestion of

EcoRI which site is also included in vector. An RNA strand  
converted to a DNA strand by Okayama-Berg method. The  
obtained cDNA vectors were used for transformation of  
competent cells E. coli Top10F by electroporation method.  
The cDNA libraries constructed by this method are  
full-length enriched cDNA library."

 VERSION CX846858.1 GI:58502125  
 KEYWORDS EST.  
 SOURCE Xenopus tropicalis (western clawed frog)  
 ORGANISM Xenopus tropicalis

Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Amphibia; Batrachia; Anura; Mesobatrachia; Pipidae; Pipidae; Xenopodinae; Xenopus; Silurana.

## REFERENCE

AUTHORS

Richardson, P., Lucas, S., Rokhsar, D., Dettler, J.C., NG, D.C.,

Brokstein, P. and Lindquist, E.A.

DOE Joint Genome Institute Xenopus tropicalis EST project

Unpublished (2004)

Fax: 925 296 5710

Email: cdna@jgi-psf.org

Tissue Procurement: Timothy Grammer (Richard M. Harland Laboratory,

University of California, Berkeley:

http://tropicalis.berkeley.edu/home)

cDNA Library Preparation: DOE Joint Genome Institute:

http://www.jgi.doe.gov

DNA Sequencing: DOE Joint Genome Institute: http://www.jgi.doe.gov

Clone Distribution: I.M.A.G.E. Consortium/LLNL:

http://image.llnl.gov

Naming Conventions: EST name is generated by the concatenation of

the JGI Clone Id and the direction of sequencing. The suffix 'rev'

indicates a reverse sequencing read of the insert. It does not

necessarily reflect the orientation of the insert.

Poly-A: Based upon the presence of a run of 14 or more T residues

at the beginning of the sequence, this clone was polyadenylated.

The resulting Poly-T sequence has been removed.

Plate: CAAK 0133 row: m column: 12  
High quality sequence stop: 311  
POLYA=Yes.

This library was made from dr primed cDNA and cloned into  
Invitrogen pCMVSPORT6 vector. The work was done at DOE  
Joint Genome Institute. Poly A RNA were primed with 5',  
GACTAGTCTAGATCGCAG CGGCGCCCTTTT TTTT 3'. cDNA  
were ligated to SalI adapter (5' TCGACCCACGCGTCGG and  
5'CGACGCGTGGG), digested with NotI, size fractionated in  
1.1% agarose gel electrophoresis and ligated into NotI and  
SalI digested pCMVSPORT6 vector."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

# COMMENT

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated

by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

## COMMENT

Submitted (20-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 20, 2002 this sequence version replaced gi:23908470. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

NEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan; cDNA full insert sequencing:
Research Association for Biotechnology (RAB); cDNA library
construction: Helix Research Institute (HRI) (supported by Japan
Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
HRI, and Biotechnology Center, National Institute of Technology and
Evaluation; clone selection for full insert sequencing: HRI and
RAB; annotation: HRI and RAB.

MAPPED CLONE OVERLAP: pDJ59m18 and 6-109h6.  
 IMPORTANT: This submission contains the entire insert of clone pDJ1082L12. pDJ1082L12 comes from a PAC library constructed at the Roswell Park Cancer Institute by the Pieter de Jong group. This clone has been finished according to strict quality criteria and attempts have been made to resolve all base calling problems such as compressions and repetitive elements. The expected phred/phrap calculated errors/10kb is 0.39. In addition, this sequence has been finished such that 99.9% of consensus base calls consist of either double-stranded coverage or 2 types of labeling chemistry on one strand.

TITLE	Direct Submission
JOURNAL	Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
COMMENT	On Jun 21, 2002 this sequence version replaced gi:21217881. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em.; EMBL; Sw.; SWISSPROT; Tr.; TREMBL; Wp.; WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/ChrX CTD-2338C19 is from the Caltech genomic sperm BAC library D. VECTOR: pBelobAC11
	----- Genome Center Center: Wellcome Trust Sanger Institute Center code: SC Web site: http://www.sanger.ac.uk Contact: vegas@sanger.ac.uk ----- This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such

as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

COMMENT

\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 14 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.  
\* 1 3189: contig of 3189 bp in length  
\* 3190 3289: gap of 100 bp  
\* 3290 9680: contig of 6391 bp in length  
\* 9681 9780: gap of 100 bp

----- Genome Center

Center: Baylor College of Medicine  
Center code: BCM  
Web site: <http://www.hgsc.bcm.tmc.edu/>  
Contact: hgsc-help@bcm.tmc.edu  
----- Project Information  
Center project name: HBJF  
Center clone name: RP11-75415  
----- Summary Statistics  
Sequencing vector: M13;  
Chemistry: Dye-terminator Big Dye; 100% of reads  
Assembly program: Phrap; version 0.990329  
Consensus quality: 121512 bases at least Q40  
Consensus quality: 129899 bases at least Q30  
Consensus quality: 135781 bases at least Q20  
Estimated insert size: 144188; sum-of-contigs estimation  
Quality coverage: 3x in Q20 bases; sum-of-contigs estimation  
-----  
\* NOTE: Estimated insert size may differ from sequence length  
(see [http://www.hgsc.bcm.tmc.edu/docs/Genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)).  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 25 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.  
\* 1 2325: contig of 2325 bp in length  
\* 2326 2425: gap of unknown length  
\* 2426 4893: contig of 2468 bp in length  
\* 4894 4894: gap of unknown length  
\* 4894 8632: contig of 3639 bp in length  
\* 8633 8732: gap of unknown length  
\* 8733 11069: contig of 2337 bp in length  
\* 11070 11189: gap of unknown length

## COMMENT

On Nov 19, 2002 this sequence version replaced gi:23195195.  
 The sequence in this assembly is a combination of BAC based reads  
 and whole genome shotgun sequencing reads assembled using Atlas  
 (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described  
 in the feature table below represents a scaffold in the Atlas  
 assembly (a 'contig-scaffold'). Within each contig-scaffold,  
 individual sequence contigs are ordered and oriented, and separated  
 by sized gaps filled with Ns to the estimated size. The sequence  
 may extend beyond the ends of the clone and there may be sequence  
 contigs within a contig-scaffold that consist entirely of whole  
 genome shotgun sequence reads. Both end sequences and whole genome  
 shotgun sequence only contigs will be indicated in the feature  
 table.

Center: Baylor College of Medicine

Center code: BCM

Web site: <http://www.hgsc.bcm.tmc.edu/>

Contact: [hgsc-help@bcm.tmc.edu](mailto:hgsc-help@bcm.tmc.edu)

----- Project Information

Center project name: GRXJ

Center clone name: CH230-246P24

----- Summary Statistics

Assembly program: Phrap; version 0.990329

Consensus quality: 197380 bases at least Q40

Consensus quality: 199965 bases at least Q30

Consensus quality: 201900 bases at least Q20

Estimated insert size: 199042; sum-of-contigs estimation

Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

-----

\* NOTE: Estimated insert size may differ from sequence length  
 \* (see [http://www.hgsc.bcm.tmc.edu/docs/Genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)).  
 \* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 7 contigs. The true order of the pieces  
 \* is not known and their order in this sequence record is  
 \* arbitrary. Gaps between the contigs are represented as  
 \* runs of N, but the exact sizes of the gaps are unknown.  
 \* This record will be updated with the finished sequence  
 \* as soon as it is available and the accession number will  
 \* be preserved.

\* 1 197215: contig of 197215 bp in length  
 \* 197216 197315: gap of unknown length  
 \* 197316 201157: contig of 3842 bp in length  
 \* 201158 201257: gap of unknown length  
 \* 201258 204646: contig of 3389 bp in length  
 \* 204647 204746: gap of unknown length  
 \* 204747 205898: contig of 1152 bp in length  
 \* 205899 207611: contig of 1613 bp in length  
 \* 207612 209032: contig of 1321 bp in length  
 \* 209033 209132: gap of unknown length  
 \* 209133 211635: contig of 2503 bp in length.

COMMENT

Submitted (16-DEC-2004) Wellcome Trust Sanger Institute, Hinxton,  
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk  
Clone requests: Clonerequest@sanger.ac.uk  
On Feb 1, 2002 this sequence version replaced gi:18181711.  
The following abbreviations are used to associate primary accession  
numbers given in the feature table with their source databases:  
En:, EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp:, WORMPEP; Information  
on the WORMPEP database can be found at  
http://www.sanger.ac.uk/Projects/C\_elegans/wormpep -----  
Genome Center  
Center: UK Medical Research Council  
Center code: UK-MRC  
Web site: http://mrcseq.har.mrc.ac.uk  
Contact: mouseq@har.mrc.ac.uk

-----  
This sequence was finished as follows unless otherwise noted: all  
regions were either double-stranded or sequenced with an alternate  
chemistry or covered by high quality data (i.e., phred quality >=  
30); an attempt was made to resolve all sequencing problems, such  
as compressions and repeats; all regions were covered by at least  
one subclone; and the assembly was confirmed by restriction digest,  
except on the rare occasion of the clone being a YAC.  
Sequence from the Mouse Genome Sequencing Consortium whole genome  
shotgun may have been used to confirm this sequence. Sequence data  
from the whole genome shotgun alone has only been used where it has

a phred quality of at least 30.  
RP23-277B9 is from the RPCI-23 Mouse BAC Library  
constructed by the group of Pieter de Jong.  
For further details see http://www.chori.org/bacpac/home.htm  
VECTOR: pBAC3.6.

to all pairs of overlapping reads to call NQS bases and SNPs. Alignments (between two reads) with less than 100 NQS bases or with SNP rate > 0.01 were discarded. To exclude alignment between two copies of a single read, comparisons between two reads that share 95% of their genome alignments (>=95% bases of read A and >=95% bases of read B were placed at the same locus of human genome) were discarded.

Primer A: No sequence submitted  
Primer B: No sequence submitted  
STS size: 988  
Protocol:  
23,021,928 chimpanzee whole genome shotgun reads were aligned to the Human genome NCBI  
Build 34 (hg16, July 2003). Chimp WGS reads were from 9 donors, including Clint (Pan troglodytes verus), 3 other Pan troglodytes verus chimps (Donald, Karlén, Yvonne), 3 Pan troglodytes troglodytes chimps (Noemie, Masuku, Clara) and 2 chimps of unknown origin (Gon, Unknown Chimp). Common names: Pan troglodytes verus is the western chimp and Pan troglodytes troglodytes is the central chimp. To be included in chimpanzee SNP discovery, a read must be at least 500bp in length, at least 50% of its base calls must have Phred

score >= 20, at least 30% of its base calls must satisfy SNOS(30,25)(single strand NQS, the base in question has Phred score >= 30, the surrounding 10 bases in the read have Phred score >= 25), and the read must have at least 200 bp SNQS(30,25) bases. Reads not uniquely placed in the genome and read pairs whose two ends were not consistently placed were discarded. After above filtering, NQS(30,25) standard was applied to all pairs of overlapping reads to call NQS bases and SNPs. Alignments (between two reads) with less than 100 NQS bases or with SNP rate > 0.01 were discarded. To exclude alignment between two copies of a single read, comparisons between two reads that share 95% of their genome alignments (>=95% bases of read A and >=95% bases of read B were placed at the same locus of human genome) were discarded.

NOTICE: This sequence may not be the entire insert of this clone.  
It may be shorter because we only sequence overlapping sections  
once, or longer because we provide a small overlap between  
neighboring submissions.

This sequence was finished as follows unless otherwise noted: all  
regions were double stranded, sequenced with an alternate chemistry  
or covered by high quality data (i.e., phred quality >= 30); an  
attempt was made to resolve all sequencing problems, such as  
compressions and repeats; all regions were covered by sequence from  
more than one ml3 subclone.

For a graphical representation of this clone sequence and its  
analysis see:  
http://www.wormbase.org/db/seq/sequence?name=F20B6;class=Sequence

## NEIGHBORING CLONE INFORMATION

The 5' clone is ZK470, 200 bp overlap; the 3' clone is W01H2, 1600  
bp overlap. Actual start of this clone is at base position 41972 of  
ZK470; actual end is at 38099 of F20B6.

## NOTES:

Coding sequences below are the result of integration and manual  
review of the following data : computer analysis using the program  
GeneFinder (P. Green and L. Hillier, personal communication), the  
large scale EST projects of Yuji Kohara  
(http://www.ddbj.nig.ac.jp/c-elegans/html/CE INDEX.html) and The C.  
elegans ORFome cloning project (http://wofdb.dfci.harvard.edu/),  
similarity to other proteins from BlastX analyses  
(http://blast.wustl.edu/), sequence conservation with C. briggsae  
using Jim Kent's WABA alignment program (Genome Research  
10:1115-1125, 2000), individual C. elegans GenBank submissions,  
and personal communications with C. elegans researchers. tRNAs  
are predicted using the program tRNAscan-SE (Lowe, T.M. and  
Eddy, S.R., 1997, Nucl. Acids. Res., 25, 955-964).

----- Genome Center  
Center: NIH Intramural Sequencing Center  
Center code: NISC  
Web site: http://www.nisc.nih.gov  
Contact: nisc.zoo@nhgri.nih.gov  
----- Project Information  
Center project name: Gcy  
Center clone name: 100N14

The sequence data in this record represents an 'enhanced'  
version of a Phase 2 submission. Specifically, the indicated  
order and orientation of each sequence contig, has been  
established using one or more of the following: read-pair  
data from individual subclones, overlaps with neighboring  
clones, alignment with available reference sequence (e.g.,  
human), and/or confirmation by PCR testing. In addition,  
the sequence assembly is generally based on at least 8X average  
coverage in Q20 bases and has been reviewed to rule out  
gross misassemblies, the low-quality ends of sequence  
contigs have been trimmed away, and each base is associated  
with a Phrap-derived quality score.

----- Summary Statistics

Sequencing vector: plasmid; n/a; 100% of reads  
Chemistry: Dye-terminator Big Dye; 100% of reads  
Assembly program: Phrap; version 0.990319  
Consensus quality: 154395 bases at least Q40  
Consensus quality: 154656 bases at least Q30  
Consensus quality: 154772 bases at least Q20  
Insert size: 174000; agarose-fp  
Quality coverage: 13.02x in Q20 bases; agarose-fp  
Quality coverage: 14.60x in Q20 bases; sum-of-contigs

-----  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 3 contigs. Gaps between the contigs  
\* are represented as runs of N. The order of the pieces  
\* is believed to be correct as given, however the sizes  
\* of the gaps between them are based on estimates that have  
\* provided by the submittor.  
\* This sequence will be replaced  
\* by the finished sequence as soon as it is available and  
\* the accession number will be preserved.  
\* 1 98407: contig of 98407 bp in length  
\* 98408 98507: gap of unknown length  
\* 98508 152440: contig of 53933 bp in length  
\* 152441 152540: gap of unknown length  
\* 152541 155293: contig of 2753 bp in length.

```
PS This sequence encodes the rat Kv3.1 alpha-subunit. Kv3.1 is a voltage-
gated potassium channel which is predominantly located within a subset of
gated potassium channels within the brain, namely the parvalbumin-
gated potassium channels. Its function is to allow fast repolarisation of
containing interneurons. The cells and thus, contributes to the fast-firing phenotype of these
neurons. Parvalbumin expression has been shown to be altered within the
prefrontal cortex in schizophrenia. There are two alternative splice
variants of the Kv3.1 alpha-subunit, Kv3.1a and Kv3.1b, with each variant
only differing at the intracellular C-terminal. The Kv3.1 alpha-subunit
polynucleotide and polypeptide are useful for diagnosing schizophrenia,
and for identifying compounds that modulate the expression of the
polypeptide or polynucleotide, or the activity of Kv3.1. They are also
useful for the identification of subjects who are predisposed to
schizophrenia, and for evaluating the efficacy of drugs for such
disorder, and monitoring the progress of patient symptoms involved in
clinical trials for the treatment of such disorder.

XX
XX New polynucleotides and polypeptides, useful for diagnosing
XX schizophrenia, and for identifying a compound modulating the activity of
XX Kv3 channels.
XX
XX Claim 1; SEQ ID NO 1; 50pp; English.
XX
XX The invention relates to the use of a polynucleotide comprising a
XX sequence of 3977, 2441 or 3410 base pairs, fully defined in the
XX specification, its fragment or complement, for diagnosis or treating
XX schizophrenia. The invention also claims a method for screening for a
XX compound regulating the expression of the polynucleotide comprising: (a)
XX bringing a test compound into contact with a cell capable of expressing
XX the polynucleotide, whose expression is desired to be controlled; (b)
XX detecting the expression of the polypeptide in the cell; and (c)
XX determining a compound promoting or suppressing the expression of the
XX polypeptide compared to a control. The polynucleotides and polypeptides
XX are useful for diagnosing schizophrenia, and for identifying a compound
XX modulating the activity of Kv3 channels. They are also useful for the
XX identification of subjects who are predisposed to schizophrenia, and for
XX evaluating the efficacy of drugs for such disorder, and monitoring the
XX progress of patient symptoms involved in clinical trials for the
XX treatment of such disorder. This sequence corresponds to the gene for rat
XX voltage-gated potassium channel Kv3.1.

XX
XX Combination of polynucleotide probes, useful as array elements in a
XX microarray for monitoring the expression of a number of target
XX polynucleotides.
XX
XX Claim 1; SEQ ID NO 1010; 65pp; English.
XX
XX The invention relates to a combination which, comprises a number of
XX polynucleotide probes comprising a sequence selected from one of the 1490
XX sequences mentioned in the specification. The combination is useful as an
XX array element in a microarray for monitoring the expression of a number
XX of target polynucleotides. The microarray is particularly useful in the
XX diagnosis and treatment of cancer and immunopathology and neuropathology.
XX The microarray is useful in diagnostics and treatment regimens, drug
XX discovery and development, toxicological and carcinogenicity studies,
XX forensics and pharmacogenomics. The microarray is also useful for
XX monitoring progression of diseases and for developing sophisticated
XX profiles for the effects of currently available therapeutic drugs. The
XX combination is also useful for purifying a subpopulation of mRNAs, cDNAs
XX and genomic fragments and in research and diagnostic applications. The
XX array can detect changes in expression in a large number of genes coding
XX for different signalling pathway populations which can be used to diagnose
XX various diseases including cancer e.g. adenocarcinoma and leukaemia,
XX immunopathies e.g. AIDS and asthma, neuropathies e.g. Alzheimer's disease
XX and Parkinson's disease. The present sequence represents a polynucleotide
XX probe of the invention. Note: The sequence data for this patent did not

XX
XX New composition comprising polynucleotide probes, useful as array
PT elements in a microarray for monitoring the expression of target
PT polynucleotides or purifying a subpopulation of mRNAs, cDNA, or genomic
PT fragments.
XX
XX Claim 6; SEQ ID NO 1010; 73bp; English.
XX
XX The invention relates to a composition of polynucleotide probes
CC comprising first polynucleotide probes comprising at least a portion of a
CC gene encoding a receptor-like polypeptide, second polynucleotide probes
CC comprising at least a portion of a gene encoding a transducing
CC polypeptide and third polynucleotide probes comprising at least a portion
CC of a gene encoding an effector-like polypeptide. The probes of the
CC composition are useful as array elements in a microarray for monitoring
CC the expression of target polynucleotides. The microarray is useful in the
CC diagnosis and treatment of cancer, an immunopathology or a
CC neuropathology. It can also be used for drug discovery and development,
CC toxicological and carcinogenicity studies, forensics or pharmacogenomics.
CC Microarrays can also be used for monitoring the progression of diseases
CC that may be associated with the altered expression of signalling pathway
CC polypeptides. The composition can also be used to purify a subpopulation
CC of mRNAs, cDNAs, or genomic fragments in a sample. The expression profile
CC is also useful for the diagnosis and treatment of cancer, e.g. cancers of
CC the adrenal gland, bladder, bone, bone marrow, brain, breast or cervix,
CC an immunopathology, e.g. AIDS, diabetes, pancreatitis, osteoporosis or
CC ulcerative colitis, or a neuropathology, e.g. dementia, amnesia,
CC epilepsy, Alzheimer's disease or depression. This sequence represents a
CC human polynucleotide probe of the invention. Note: The sequence data for
CC this patent did not form part of the printed specification but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html.

 XX (HUMA-) HUMAN GENOME SCI INC.  
 XX Rosen CA, Barash SC, Ruben SM;  
 PI WPI; 2001-541565/60.  
 DR P-PSDB; ABB14702.  
 XX Nucleic acids encoding 3224 human nervous system antigen polypeptides,  
 PT useful for preventing, diagnosing and/or treating nervous system cancers  
 and metastases.  
 XX Claim 1; SEQ ID NO 35; 1701pp + Sequence Listing; English.  
 XX The invention relates to novel genes (AB11004-ABA21534) and proteins  
 (AB114678-AB18001) useful for preventing, treating or ameliorating  
 medical conditions e.g. by protein or gene therapy. The genes are  
 isolated from a range of human tissues disclosed in the specification.  
 CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in  
 the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and  
 ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,  
 breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune  
 disorders e.g. Addison's disease, allergies, diabetes mellitus, Crohn's disease,  
 anaemia, autoimmune thyroiditis, rheumatoid arthritis and ulcerative colitis; (c)  
 multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (d) wound healing  
 cardiovascular disorders such as myocardial ischaemia; (e) neurological diseases  
 such as e.g. cerebral anoxia and epilepsy; and (f)  
 infectious diseases such as viral, bacterial, fungal and parasitic  
 infections. Note: The sequence data for this patent did not form part of  
 the printed specification, but was obtained in electronic format directly  
 from WIPO at ftp.wipo.int/pub/published\_pt\_sequences

XX (HUMA-) HUMAN GENOME SCI INC.  
XX  
XX Rosen CA, Barash SC, Ruben SM;  
XX  
XX WPI; 2001-541565/60.  
XX  
XX Nucleic acids encoding 3224 human nervous system antigen polypeptides,  
XX useful for preventing, diagnosing and/or treating nervous system cancers  
XX  
XX and metastases.  
XX

PS Disclosure; SEQ ID NO 6731; 1701pp + Sequence Listing; English.

XX The invention relates to novel genes (ABAI1004-ABA21534) and proteins

CC (ABBI4678-ABBI8001) useful for preventing, treating or ameliorating

CC medical conditions e.g. by protein or gene therapy. The genes are

CC isolated from a range of human tissues disclosed in the specification.

CC The nucleic acids, proteins, antibodies and (a) antagonists are useful in

CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and

CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,

CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune

CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic

CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,

CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)

CC cardiovascular disorders such as myocardial ischaemia; (d) wound healing

CC ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)

CC infectious diseases such as viral, bacterial, fungal and parasitic

CC infections. Note: The sequence data for this patent did not form part of

CC the printed specification, but was obtained in electronic format directly

CC from WIPO at [ftp.wipo.int/pub/published\\_pct\\_sequences](http://ftp.wipo.int/pub/published_pct_sequences)

 (HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;  
 WPI; 2001-541565/60.

Nucleic acids encoding 3224 human nervous system antigen polypeptides,  
 useful for preventing, diagnosing and/or treating nervous system cancers  
 and metastases.

Disclosure; SEQ ID NO 7692; 1701pp + Sequence Listing; English.

The invention relates to novel genes (ABAI1004-ABA21534) and proteins  
 (ABBI4678-ABBI8001) useful for preventing, treating or ameliorating  
 medical conditions e.g. by protein or gene therapy. The genes are  
 isolated from a range of human tissues disclosed in the specification.  
 The nucleic acids, proteins, antibodies and (ant)agonists are useful in  
 the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and  
 ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow,  
 breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune  
 disorders e.g. Addison's disease, allergies, autoimmune haemolytic  
 anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,  
 multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)  
 cardiovascular disorders such as myocardial ischaemias; (d) wound healing  
 ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)

CC infectious diseases such as viral, bacterial, fungal and parasitic  
 CC infections. Note: The sequence data for this patent did not form part of  
 CC the printed specification, but was obtained in electronic format directly  
 CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

 PS Claim 14; SEQ ID NO 34587; 1766pp; English.  
 XX  
 CC The invention relates to an isolated nucleic acid comprising any one of  
 CC the 6213 antisense sequences given in the specification where expression  
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:  
 CC (1) a vector comprising a promoter operably linked to the nucleic acid  
 CC encoding a polypeptide whose expression is inhibited by the antisense  
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated  
 CC polypeptide or its fragment whose expression is inhibited by the  
 CC antisense nucleic acid; (4) an antibody capable of specifically binding  
 CC the polypeptide; (5) producing of the polypeptide; (6) inhibiting cellular  
 CC proliferation or the activity of a gene in an operon required for  
 CC proliferation; (7) identifying a compound that influences the activity of  
 CC the gene product or that has an activity against a biological pathway  
 CC required for proliferation, or that inhibits cellular proliferation; (8)  
 CC identifying a gene required for cellular proliferation or the biological  
 CC pathway in which a proliferation-required gene or its gene product lies  
 CC or a gene on which the test compound that inhibits proliferation of an  
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a  
 CC compound's activity; (11) a culture comprising strains in which the gene  
 CC product is overexpressed or underexpressed; (12) determining the extent  
 CC to which each of the strains is present in a culture or collection of  
 CC strains; or (13) identifying the target of a compound that inhibits the  
 CC proliferation of an organism. The antisense nucleic acids are useful for  
 CC identifying proteins or screening for homologous nucleic acids required  
 CC for cellular proliferation to isolate candidate molecules for rational  
 CC drug discovery programs, or for screening homologous nucleic acids  
 CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,  
 CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is one of the target  
 CC prokaryotic essential genes. Note: The sequence data for this patent did  
 CC not form part of the printed specification, but was obtained in  
 CC electronic format directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pct\_sequences

XX
XX AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides
CC (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (I)
CC and (II) can have antibacterial activity and therefore can be used in
CC vaccination. The nucleic acids (I) may be used to produce the S.
CC epidermidis polypeptides (II) via the production of vectors containing
CC them which are used to produce hosts cells which express the
CC polypeptides. The polypeptides (II) (and/or nucleic acids) may then be
CC used to vaccinate subjects and to raise antibodies against the bacteria.
CC The polypeptides may also be used to assay for other inhibitors of their
CC activity and therefore identify compounds that may be used for the
CC treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to
CC AAH5090 represent specifically claimed S. epidermidis genomic DNA
CC polynucleotide sequences from the present invention. AAH5091 to AAH5098
CC represent oligonucleotide sequences and primers which are used in the
CC exemplification of the present invention. N.B. The present invention
CC specifically claims all the polynucleotide sequences given in the
CC sequence listing of the present specification, however the sequence
CC listing only goes up to SEQ ID NO:4454 so even though sequences are given
CC in the disclosure for SEQ ID NO:4465 to 4472, no sequences are present
CC for SEQ ID NO:4455 to 4464

XX The invention describes an isolated nucleic acid comprising a nucleotide  
CC sequence with any of 3772 fully defined nucleotide sequences (SEQ ID NO:  
CC 1-3772) and encoding an Staphylococcus epidermidis polypeptide with any  
CC of 3772 fully defined amino acid sequences (SEQ ID NO: 3772-7544) as  
CC given in the specification. Also described are: a recombinant expression  
CC vector; a cell comprising a recombinant expression vector of (i);  
CC comprising an S. epidermidis polypeptide; an isolated nucleic acid  
CC comprising a nucleotide sequence of at least 8 nucleotides in length; a  
CC vaccine composition for prevention or treatment of an S. epidermidis  
CC infection, comprising a nucleic acid cited above and a carrier; treating  
CC a subject for S. epidermidis infection; a recombinant or substantially  
CC pure preparation of an S. epidermidis polypeptide or its fragment; a  
CC vaccine composition for prevention or treatment of an S. epidermidis  
CC infection; detecting the presence of a Staphylococcus nucleic acid in a  
CC sample; a computer readable medium having recorded in it the nucleotide  
CC sequences with SEQ ID NO: 1-3772 or its fragments; a computer based  
CC system for identifying fragments of the Staphylococcus genome of  
CC commercial importance; a computer based system for identifying fragments  
CC of the Staphylococcus plasmids of commercial importance; identifying  
CC commercially important nucleic acid fragments of the Staphylococcus  
CC genome and/or plasmids; and identifying an expression modulating fragment  
CC of the Staphylococcus genome and/or plasmids. The methods and  
CC compositions of the present invention are useful for the diagnosis,  
CC prevention and/or treatment of an Staphylococcal epidermidis bacterial  
CC infection. This sequence encodes a S. epidermis protein of the invention.

XX  
XX Nucleic acids encoding polypeptides from Staphylococcus epidermidis,  
PT useful for vaccinating against infections, e.g. endocarditis.  
XX  
XX Claim 8; Page 1960-1961; 2188pp; English.  
XX  
XX AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides  
CC (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (I)  
CC and (II) can have antibacterial activity and therefore can be used in  
CC vaccination. The nucleic acids (I) may be used to produce the S.  
CC epidermidis polypeptides (II) via the production of vectors containing  
CC them which are used to produce hosts cells which express the  
CC polypeptides. The polypeptides (II) (and/or nucleic acids) may then be  
CC used to vaccinate subjects and to raise antibodies against the bacteria.  
CC The polypeptides may also be used to assay for other inhibitors of their  
CC activity and therefore identify compounds that may be used for the  
CC treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to  
CC AAH55090 represent specifically claimed S. epidermidis genomic DNA  
CC polynucleotide sequences from the present invention. AAH55091 to AAH55098  
CC represent oligonucleotide sequences and primers which are used in the  
CC exemplification of the present invention. N.B. The present invention  
CC specifically claims all the polynucleotide sequences given in the  
CC sequence listing of the present specification, however the sequence  
CC listing only goes up to SEQ ID NO:4454 so even though sequences are given  
CC in the disclosure for SEQ ID NO:4465 to 4472, no sequences are present  
CC for SEQ ID NO:4455 to 4464

PT Determining susceptibility of an individual to joint space narrowing,  
PT osteophyte development and/or joint pain comprises identifying whether  
PT the individual has at least one polymorphism in a polynucleotide encoding  
PT ..a protein.

XX Disclosure; SEQ ID NO 345; 297pp; English.  
XX  
CC The invention relates to a method of determining susceptibility of an  
CC individual to joint space narrowing and/or osteophyte development and/or  
CC joint pain comprising identifying whether the individual has at least one  
CC polymorphism in a polynucleotide encoding at least one of the protein  
CC listed in the specification. The methods, composition and agent are  
CC useful for modulating the susceptibility of an individual to joint space  
CC narrowing and/or osteophyte development and/or joint pain that is  
CC associated with a disease, preferably osteoarthritis. The cell line and  
CC the non-human animal are useful for screening for an agent for diagnosing  
CC an individual having susceptibility to joint space narrowing and/or  
CC osteophyte development and/or joint pain. This sequence corresponds to  
CC the polynucleotide encoding a protein listed in the specification. (Note:  
CC The sequence data for this patent did not form part of the printed  
CC specification but was obtained in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences).

PT Novel reproduction-specific protein, useful for treating disorders of  
PT reduced sperm count, enhancing/increasing sperm count and/or sperm  
PT activity.  
XX  
PS Claim 1; Fig 61; 151pp; English.  
XX  
CC The present invention relates to the isolation of novel mammalian and  
CC human reproductive-specific proteins (AAU07859-AAU07899), and the nucleic  
CC acids encoding them. The nucleic acids encoding reproductive-specific  
CC proteins are useful for diagnosing infertility which is a result of  
CC reduced sperm count, reduced sperm motility, malformed sperm or  
CC combinations of these. The sequences of the invention are useful as

CC markers for spermatogonial cells, for identifying genes or proteins  
CC characteristic of male infertility, diagnosing or aiding in the diagnosis  
CC of infertility in men, and for contraception in which sperm production or  
CC sperm count is reduced or defective sperm is produced. Antibodies to  
CC reproductive-specific proteins are useful for determining the presence of  
CC these proteins in a sample obtained from a man being assessed for  
CC infertility, for identifying the expression of genes in particular cell  
CC type or particular developmental stage, for studies of spermatogenesis,  
CC and for immunofluorescence of germ cells or in Western blots for  
CC assessing the presence of the protein the antibody binds. The sequences  
CC of the invention are also useful for treating disorders of reduced sperm  
CC count, and for increasing sperm count and/or sperm activity. The nucleic  
CC acids of the invention are useful in gene therapy. AAS13648-AAS13671  
CC represent nucleic acid sequences encoding for the human reproduction-  
CC specific proteins of the present invention

XX New isolated nucleic acid molecule with an allelic variant of a  
XX polymorphic region of an 5-LO gene, useful for diagnosing and/or  
XX prognosticating disorders associated with an aberrant inflammatory  
XX response such as asthma.  
XX  
XX Disclosure; Fig 4; 290pp; English.  
XX  
XX The invention relates to an isolated human nucleic acid molecule  
XX comprising an allelic variant of a polymorphic region of a 5-lipoxygenase  
XX (5-LO) gene, where the allelic variant comprises one or more nucleotide  
XX selected from any of 3, 20 or 21 base pair sequences, given in the  
XX specification, or their complement. The compositions and methods of the

CC present invention are useful for diagnosing and/or prognosing disorders  
CC associated with an aberrant inflammatory response such as asthma,  
CC bronchitis, sinusitis, ulcerative colitis, nephritis, amyloidosis,  
CC rheumatoid arthritis, sarcoidosis, scleroderma, lupus, non-allergic  
CC rhinitis, polymyositis, Reiter's syndrome, psoriasis, pelvic inflammatory  
CC disease, atopic and contact dermatitis. The nucleic acid molecules can  
CC also be useful for identifying an individual amongst other individuals  
CC from the same species for use in forensic medicine and paternity testing.  
CC This polymucleotide sequence represents DNA relating to the human 5-  
CC lipoxygenase (5-LO) gene of the invention

XX
CC The invention discloses a composition comprising two or more isolated rat
CC or human polynucleotides or a polynucleotide which represents a fragment,
CC derivative or allelic variation of the nucleic acid sequence. Also
CC claimed are a vector comprising the novel polynucleotide, a host cell
CC comprising the vector, a method for identifying a nucleotide sequence
CC which is differentially regulated in an animal subjected to pain and a
CC kit to perform the method, an array, a method for identifying an agent
CC that increases or decreases the expression of the polynucleotide sequence
CC that is differentially expressed in neuronal tissue of a first animal
CC subjected to pain, a method for identifying a compound which regulates
CC the expression of a polynucleotide sequence which is differentially
CC expressed in an animal subjected to pain, a method for identifying a
CC compound that regulates the activity of one or more of the
CC polynucleotides, a method for producing a pharmaceutical composition, a
CC method for identifying a compound or small molecule that regulates the
CC activity in an animal of one or more of the polypeptides given in the
CC specification, a method for identifying a compound useful in treating
CC pain and a pharmaceutical composition comprising the one or more
CC polypeptides or their antibodies. The polynucleotide or the compound that
CC modulates its activity is useful for preparing a medicament for treating
CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
CC therapy). The sequence presented is a human DNA (shown in Table 2 of the
CC
```

```
CC specification) which encodes one of the polypeptides of the invention
CC which is differentially expressed during pain. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic form directly from WIDO at
CC ftp.wipo.int/pub/published_pct_sequences.
